PREFACES

Although not large in area, Switzerland is a surprisingly complex country, as outside observers of our way of life discover. The fact that Switzerland is able to remain a real entity despite its great differences in tradition, politics, languages and culture is due to the federalist system which is its chief characteristic.

It will be obvious that Swiss radio and television services are in tune with this federalism which allows them to do their job under the best possible conditions. This also means that both radio and television reflect the rich complexity of Swiss federalism. The SBC (1) transmits two radio programmes and one television programme (2) for each of its three linguistic regions. Then there are the external services of the SBC, transmitting more than 50 hours of programmes per day for Europe and overseas, and to which I have the honour to belong.

The need to speak to listeners beyond the frontiers of Switzerland first became apparent in the 1930's. At that time it was thought advisable, above everything else and irrespective of how the increasingly dangerous international situation would develop, to set up and maintain an immediate and permanent valid link with the hundreds of thousands of Swiss citizens living in other countries.

Thus, the Swiss Short Wave Service carried out the task assigned to it, but soon it also began to attract the attention of non-Swiss listeners who today make up more than 90% of our audiences.

What do these listeners expect of us? From the comments and suggestions we receive, we can reasonably conclude that what our audiences want from the Swiss Shortwave Service is general information that is objective, honest, accurate, interesting and presented without polemics.

To the full limit of our possibilities we try to broadcast this kind of information, about Swiss and international affairs, creating a parallel and genuine dialogue with our listeners. We think this is an excellent way of carrying out the task entrusted to us—to help our country to become better known abroad.

Uppermost in our minds on the threshold of 1969 is the preparation of a new programme plan and a new programme style, for we are well aware that a radio station that ignores the fantastic developments of our days is irreparably lost. Radio, including short wave radio must adjust itself to this reality.

And on the subject of programmes, I should like to pay tribute to WRTH which, year after year, faithfully and competently, provides information indispensable to all those who listen in to the world of radio.

Joël Curchod

Director

SBC'S EUROPEAN & OVERSEAS SERVICES

It is with genuine pleasure that we offer our congratulations on the occasion of the 23rd edition of the World Radio TV Handbook. The growth over the years is phenomenal and reflects the expansion of broadcasting in our time.

One of the things which makes man the dominant species on this planet is his ability to communicate. Along with this ability comes the need to communicate with others. Personal life, as well as national development, depends upon our communion

with other people. No thought has significance unless we share it. No insight of wisdom is worth anything unless we disclose it.

Cicero made this observation: "If a wise man were granted a life of abundance of everything material so that he had leisure to contemplate everything worth knowing, still if he could not communicate with another human being he would abandon life."

The Far East Broadcasting Company has recognized the imperative of communicating a message of hope and goodwill in Asia. After over twenty years of broadcasting, FEBC-Manila now airs more than 40 hours daily on its Overseas Service, in addition to operating two Manila stations on the air 24 hours daily, plus several provincial stations in the outreaches of the Philippines. Three stations operate in Okinawa (just south of Japan). And KGEI, San Francisco, California, offers Latin American listeners programs of value. Total weekly program hours for all of FEBC exceeds 700.

The Far East Broadcasting Company is dedicated to highest cultural, moral and spiritual principles. Our message of hope is the Gospel of Jesus Christ as contained in God's Word, the Bible. FEBC exists for the communication of that message!

Best wishes for the future of the **WORLD RADIO TV HANDBOOK!**

Roy H. Boettcher
Foreign Services Director

In earlier years, we in New Zealand could have been excused for feeling remote from the events and happenings in the rest of the world. As a comparatively small country whose nearest neighbour is some 1200 miles away, New Zealand has had to overcome the diverse problems that come hand in hand with geographical isolation. Poorer communications in years gone by have placed New Zealand—and, of course, many other countries—at a disadvantage in keeping up with the latest advances and trends in many fields, whether scientific, cultural or simply in knowing what was generally "going on" in the world around. There has been, furthermore, a converse effect: the people of countries far removed from the South Pacific have had little idea of where New Zealand is, and many had not even heard the name at all. In some important aspects of agricultural research, New Zealand has been a world leader, spurred on by its economic dependence on agricultural exports, and there's no doubt that New Zealand's isolation was not in the best interests of those countries elsewhere in the world who have also been strongly dependent on agriculture for economic survival.

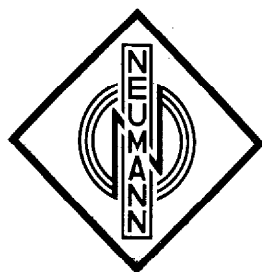

(1) The Swiss Broadcasting Corporation (SBC) is a non-governmental organisation operating under a charter granted by the Federal authorities. It is the sole organisation providing radio and television facilities in Switzerland. The different member-societies of the SBC guarantee proper representation for the various regions of the country. Operation of the transmitters is in the hands of the Federal Post, Telephone and Telegraph Administration (PTT).

(2) Plans are presently being developed to provide additional television programmes for viewers in each language region of Switzerland.

PEACE AND PROGRESS

Radio Station "Peace and Progress" is sponsored by Soviet public organizations. It broadcasts in English, French, Spanish, Portuguese, German, Hebrew, Yiddish, Guarani, Chinese and Mongolian. Programmes are beamed daily to Asia, Australia, Africa, the Near and Middle East, Latin America and Europe.

It is the aim of Radio Station "Peace and Progress" to acquaint its listeners with Soviet public opinion on vital questions, with the point of view of the Soviet people on international events, to inform them of the current events taking place in various countries and to cover the activities of international organizations.

Our address:

Radio Station "Peace and Progress"
Moscow, U.S.S.R.

We establish contacts and sign contracts with foreign broadcasting stations and information agencies to provide them with materials on political questions as well as questions dealing with the public life of our country.

For the promotion of a better understanding between the peoples of the world:

Happily, many of these problems no longer exist. Communications have, of course, developed immensely; and there has also been an increasing pulling together of the resources of those intimately involved in the task of communicating—we, the broadcasters. Ideas have been pooled, information exchanged and compared, and channels for creating a greater awareness of the way others live have widened through the regular traffic of radio and television programmes.

For its part, the NZBC has been concentrating strongly on programme exchange, offering to broadcasting organisations in practically every part of the world the cream of those locally-produced radio and television programmes depicting New Zealand and its way of life. Our geographical position makes extensive shortwave broadcasting an unattractive proposition and this service is limited mainly to the Pacific Islands, Australia and New Zealanders working in the Antarctic.

The NZBC is a member of the Asian Broadcasting Union and the Commonwealth Broadcasting Conference (which it hosted early in 1968); and is also an Associate Member of the European Broadcasting Union.

Co-operation is the keyword with all these organisations—co-operation aimed at advancing the standards of broadcast communications and through this, the furtherance of international goodwill and understanding.

The vital role filled by the WRTH in this continuous process is an obvious one: it is a permanent guide and directive, an accurate and ever-ready source of information essential to the broadcaster who recognises his place in the world-wide system of information, entertainment and education. It has proved itself an invaluable standby during 23 years of publication, and as broadcasting organisations throughout the world expand and increase in numbers, WRTH will expand in importance accordingly. Its future is assured.

G. H. Stringer
Director General

New Zealand Broadcasting Corporation

If you are a professional user of the **WORLD RADIO-TV HANDBOOK**, this article is not intended for you: you will have your own reasons for having a copy on your desk, or on your bookshelf. No! I am writing as a practising DXer for practising DXers, some of whom will be looking at the 'Handbook' for the very first time.

One of my occupations in connection with radio is editing one of the DX bulletins which appear in a flood from the radio and DX Clubs of the World.

Frequently, editors of such bulletins are asked the question: "What's the WRTH like?". Of course, it is easy to say that it is the only source from which you can obtain information regarding virtually every radio station in the world, and about the only source which provides all the information you are likely to require in the space of 300, or so, pages. Sooner or later, a new DXer who has just acquired the 'Handbook' remarks that there is so much information within its covers that he does not know where to start in absorbing it all. To that there is only one answer and that is to treat the 'Handbook' as a **working** book and not as something that sits on top of the receiver, only looked at when a difficult logging requires identification—that will only give you part of the value that lies in the 'Handbook'. The 'Handbook' is designed to be a working book and so it needs just a little work from you if you are to get real value for your money.

Have you ever sat alongside a really experienced DXer whilst he tunes through one of the bands on his radio? Have you noticed the way in which he identifies station after station, often without hearing more than a few seconds of its programming—a snatch of interval signal here: a few words of announcement there: a brief identification in some uncommon language: or even a few bars of unusual music? If you have done so, you will know that he manages to identify many more stations than you, my novice friend, would manage to log, let alone name, in the same trip through the band. How does he do it? No—he doesn't speak 20 different languages, and his equipment need not be more sophisticated than yours. What then is his secret? In a phrase—he has trained himself to listen, and to know what he is listening for. How can this be done you may ask—the answer is by study, but study which is pleasurable and in which there are no examinations which must be passed. How successful you get is purely a matter for your own choice—nobody will say: "You should have done more work". It's up to you, and you are your own examiner in the state of proficiency that you achieve.

It is not possible to prepare for any 'qualification' without a textbook and in your hands you are holding the textbook which can open the door to an undreamed-of world—the great big world in which radio stations in some 200 or more countries are waiting to be logged. However, this is a textbook with a difference: it's all pleasure! Look through the pages of the 'Handbook' and dream of the delights that you may be fortunate enough to hear coming out of your loudspeaker one day when the conditions are just right, and you are in luck. **Hearing** a station is one thing: **identifying** it is another, and stations don't repeat their announcements over and over again so that you can manage to log them (although you can achieve this happy state of affairs if you make certain that your tape-recorder—if you are fortunate enough to have the use of that invaluable machine—is always ready!). So, you've got to do your homework, and that means making the 'Handbook' your companion whenever you have a few minutes to spare.

I said earlier that the 'Handbook' is a working book and it is, too, a book that is meant to be read, not just used as a reference source. The 'rare' DX station will normally be heard as a fairly weak signal—unless you are very lucky!—and may well be using a language which is not common in your part of the World. So, you want to be ready for the snap identification of the interval signal that is half-heard through the static: you need to be ready for the sign-off that may well come just as you've got the signal well tuned in. This is where the 'homework' pays off and can mean the difference between **thinking** that you heard a particular station and being **certain** that you heard it. The 'Handbook' is meant to be used, not kept to keep the lid of the receiver propped open.

Browsing through the pages of the 'Handbook' is the only way in which you can be ready for that snap identification—**BROWSE**, and you will be surprised how much of the contents of the book you will absorb. This is the training for listening at which the old-hand is such a past-master. He has learnt—as you can!—the French, Russian, English, German, Italian, Portuguese, Spanish, Roumanian, Arabic and many more for 'This is . . .', and recognising the language used is one step toward the identification of a station. He has learnt, too, the identification and interval signals of countless stations—yes: they are all in the pages of this book. What else has he read and stored in the deepest recesses of his mind ready to be recalled when half-heard on the air? The sign-on and sign-off times of the stations in which he is interested: the fact that Radio X **does** use (say) English for just 30 minutes a day: the main outlines of the Frequency Predictions that are to be found on other pages, and lots more besides. All this—and much more—the old-timer has read and tucked away for use some day in the future, and you can do the same whilst spending many happy hours running through the 'Handbook', perhaps whilst the DX is not too good.

(continued page 10)

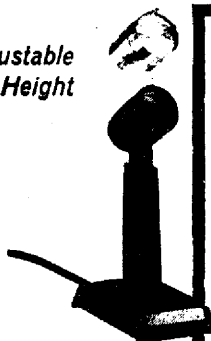

IT'S WHAT YOU'VE ASKED FOR...

At last! A quality microphone designed specifically for the ham. Incorporates features galore that hams have asked for. Tops in voice punch and intelligibility... and abounding in convenience features to minimize operator fatigue. Great for AM & FM transmission, unsurpassed for SSB. Check these outstanding ham-oriented features:

- "Shaped" response—cuts off sharply above 3000 and below 300 cps with a rising characteristic to the curve: gets the message through with top audio punch!
- Push-to-talk bar-switch with optional locking feature to control relay and mike muting circuits.
- Separate slide-switch gives choice of press-to-talk or VOX operation.
- Exclusive adjustable height stand for fatigue-free operation.
- Rugged Shure Controlled Magnetic element (U.S. Patent 2,454,425).
- Field replaceable cartridge and cable.
- ARMO-DUR case and stand—can't rust, peel, crack, or dent. Always comfortable to the touch.
- Shock proof.

HAM MICROPHONE

**For literature write to: International Sales
SHURE BROS. INC., 222 Hartrey Ave., Evanston, Ill. 60204 USA
MICROPHONES, HIGH FIDELITY AND ELECTRONIC COMPONENTS**

AL 243 audio control console has been developed to provide the control functions most needed for recording, broadcast studios, motion picture re-recording, auditoriums, theatres, concert and convention halls.

AL 243 is a basic enclosure for modular assembly of up to 16 strip modules, each hinged for easy access. Consoles may be extended or assembled in multiples, if needed.

The AL 243 active combining network, allows complete switching and combining flexibility.

☐ The console is entirely transistorized, and therefore giving high reliability through low heat generation.

☐ Input stages with alternate connections for microphone/line level, bass cut off for microphone, phase switch, bass and treble correction filter and mixing selectors with no loss to the mixing bars.

☐ The main operation faders possess output selectors on the mixing bar for parallel connection of several outputs with equal or different signals.

☐ Reverberation tapping with separate level adjustment.

☐ Pre-listening button and tapping.

☐ Separate tapping after the input fader independent of mixing selector. Faders or knobs delivered to customer's specification.

☐ Accommodate up to 4 VU Meters or peak level indicators.

☐ Complete wiring for future assembly of amplifier modules.

☐ Basic console and hardware, drilled, punched and finished. Eliminates need for special console designs and costly single lot fabrication.

☐ Switchboards based on analogous modular system for remote control of equipment, program equalizers, jack fields etc.

☐ Rugged Cannon "XLR" type on all inputs and outputs.

☐ Highly stabilised 18/24 V DC power supply unit, inside the console 105-125-volts 50-60 cycles.

☐ Basic console has an overall length of 30 inches, 22½ inches depth front to back by an average height of 10½ inches. Six-

395 TECHNICAL WORDS FROM SWEDEN. YOU'D BETTER READ THEM ALL!

teen SPR plug-in amplifiers may be accommodated inside the cabinet. Panel surface measures 16 inches from front to instrument panel.

☐ Shipping weight 38 kg.

AL 114 BASIC TECHNICAL DATA.

☐ Frequency range, 20 Hz-20 kHz ± 2 dB.

☐ Dynamic features, 125 dB referred to input.

☐ Amplification (unweighted): Open input faders with 10 dB adjustment range, 75-60-45 dB.

☐ Harmonic distortion, $< 0.5\%$ at 1 kHz $+6$ dB.

☐ Maximum output level, $+24$ dB.

☐ Overload reserve, input unit, 60 dB amplification, > 30 dB.

☐ Bass cut-off filter for microphone, -6 dB, -12 dB, -18 dB at 100 Hz.

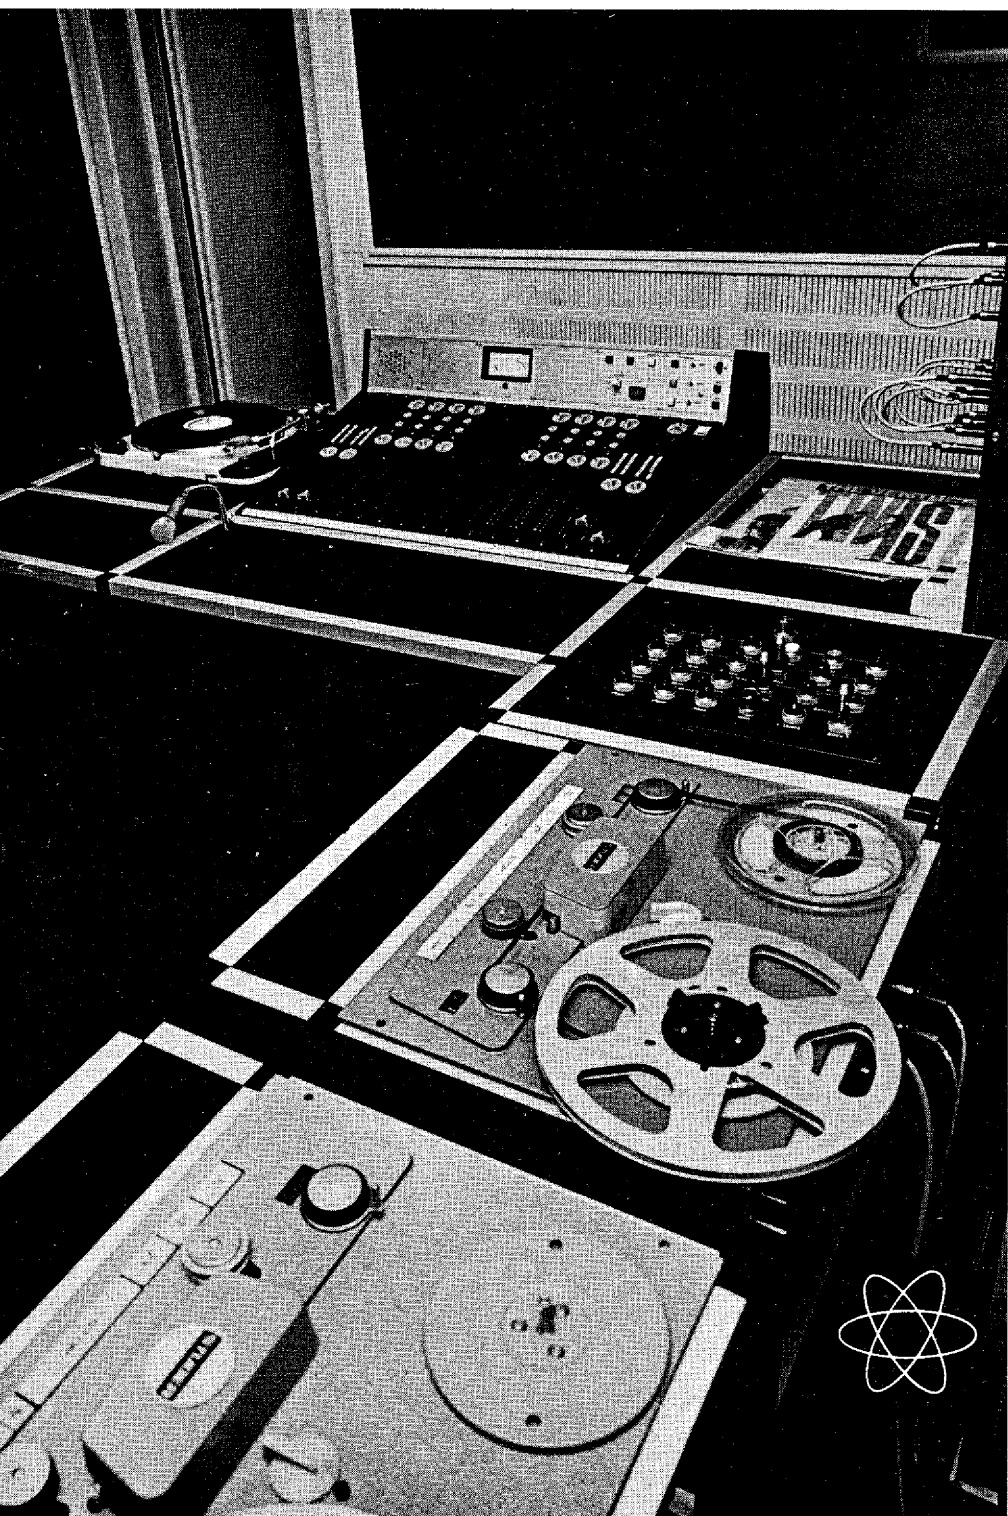

☐ Frequency control in steps of 2 dB, Boost 10 dB at 100 Hz and 10 kHz Cut 10 dB at 100 Hz and 10 kHz.

☐ Input impedance: Microphone 200 Ω . Line 600 Ω or 5 k Ω .

Changes in specification and design may be made without previous notification.

STUDIOPRODUKTION AB

Fack S-181 07 Lidingö 7 Sweden Phone: 08/775 01 60 Cable: Scanstudio

One day, the newcomer to the DXing hobby decides to try his luck on the Tropical Bands—the 60, 90 and 120 metre bands—and, frequently, this is where his interest in the hobby ends. Often a young DXer remarks that he can't identify a single station in those bands, and he fails to realise that he has reached the point in his DXing career which will decide whether he moves on to the most interesting part of the hobby, or not. These are, in my view, the bands where "learning to listen" is vital. Many things have to be learnt if you are to succeed in making sense out of the loggings that will be exclusively of stations which are DX (unless, of course, you live in an area where the Tropical Bands are much used). Where do you start? Broadly, the Tropical Bands are used in a belt that runs through Central and South America, the African Continent, the Indian sub-continent, and on into Asia and the Pacific area. So, as the transmissions are mainly for local communities it is vital that you start to acquire sufficient knowledge of the languages used to be able to—at least—recognise station identifications in Spanish, Portuguese, French, Arabic, Swahili, and the major languages of Asia. Then, too, you want to get a working knowledge of the time differences which occur around this world of ours. All this is in the pages of the 'Handbook', and it is pointless to list them all in an article like this. You know the areas in which you are interested and all the information is here at your finger-tips!

With those facts in your mind you are ready to start your assault on the DX that is there waiting to be heard on most days and nights of the year. But caution!—you don't know it all yet, my young friend. You've learnt your A.B.C. but you've still got to start putting the letters together into words. That station you log at 02.00 G.M.T. on the 60 metre band with an announcement in French—where does it come from? You are quite right that it is not likely to be from the African continent as most of their stations will be off the air at that time of the day: BUT, as in your country, no doubt, radio stations do stay open to report Election Results until late in the night, or they have extended schedules on Holidays and Feast Days. Keep your wits about you: read the world news, and be prepared for surprises! How do you identify my 'strange' station you ask? Well, this is where we get back to 'learning to listen', I'm afraid. If you know the station announcement, its interval signal, and from past experience recognise the kind of presentation it gives to its programmes—whether it is commercial or not: what sort of time signal it uses: how often it identifies itself and in what languages—then you are well on the way to identifying it, especially if you are clued-up on the names of the main political characters whose names are likely to be mentioned, and so on.

In this article I have tried to make the point that the secret of being a good DXer—the chap who hears the more unusual stations, identifies them correctly, and gets a QSL from them!—is not the expenditure of large sums of money on elaborate receivers and antenna systems. Those things help and it is foolish to deny that the better the receiver and antenna, the better are the chances of getting good DX. However, I am convinced that the greatest factor of all is whether the DXer has learned to listen—whether he has absorbed as much information as he can regarding the hobby he is involved in. A keen stamp-collector would expect to keep abreast of what is happening in the world of Philately: a keen Jazz enthusiast would regard it as essential to keep in touch with the latest happenings in the music world. Too many DXers regard DXing as just turning on the radio and tuning hopefully through a band—it's not quite as simple as that! If you can, get hold of one of the old-timers I mentioned before and sit with him as he tunes through a band identifying this and that. Then, ask him **how** he knows that it's Radio So-and-So—the chances are that he will show you that he's been getting "value for money" by a close study of the 'Handbook', and that, instinctively, he puts into practice the things which I have outlined above.

Maybe this sounds like a lot of work—it isn't! You have gone to the trouble of getting this copy of the 'Handbook'. Why not get full value for money from your purchase, and open the door to **real** DXing by identifying, for yourself, those weak stations that provide the real catches and are usually just audible 'through' the station you've heard many times. You'll be opening a door to a completely new area of interest, and you'll be astonished, I'm sure, at how knowledge begets knowledge and at how you'll find the 'Handbook' becoming more and more indispensable a tool in your DXing.

ALAN THOMPSON,
President WORLD DX CLUB, and Chief Editor 'CONTACT'.

A technical hobby of particular interest is the reception of broadcasting programmes from all over the world. For some time I have devoted many hours to shortwave strolling, the so-called DX-ing, and I find this spare-time occupation both interesting and fascinating.

What is required to enable one to indulge in this hobby? As good a radio set as possible with shortwave range, with bandspread as an added advantage. A good aerial, which one can provide oneself for little money; and, as the most important item, the

World Radio TV Handbook

which is issued annually by the publishers in Hellerup, Denmark. The regular issues are supplemented each summer by the

Summer Supplement.

The WRTH shows accurately the transmission times, frequencies, programmes and in each particular case the languages of all important broadcasting stations of our globe. The same contains further a series of informative articles on reception conditions, sun activity, aerial design and important references to DX programmes, DX clubs, transmitting stations in international waters, religious transmissions, television, tables of medium wave stations etc.

Every newcomer will be astounded by the variety in the field of shortwave radio. On the approximately 3000 shortwave frequencies a wide choice of programmes is being transmitted. Good reception depends also on many factors, such as e.g. on sun spot activity, atmospheric disturbances, day and night time between the transmitter and the receiver.

If the news of any event of world-wide significance is heard on one's home station and later compared with the commentaries—about the same event—sent out by other stations, one will be downright amazed at the differences between the versions. At a further advanced stage of shortwave reception one proceeds to the sending of reception reports to any particular radio station. After a short time one is already in possession of an attractive collection of coloured QSL cards (confirmations of receipt) from the countries of all five continents. A certain sense of pride fills any real amateur shortwave listener if he can maintain regular contacts with as many broadcasting stations as possible.

In order to have as good a reception of shortwave as possible, the demands made upon a radio set are increased slightly as time goes on. For this reason it becomes possible gradually to set up a nice reception station. The same may, depending on one's purse, be equipped with very expensive sets, which is not at all necessary, however. Quite good successes can be achieved with a portable box receiver or one designed by oneself. The possibilities increase of course with a good shortwave receiver, thus one can for example listen to the shortwave hams, telephone services (point-to-point stations), coastal services, airports (weather reports) and secret radio stations. Scattered all over the world there are very many clubs for the devotees to this hobby. Newsheets are published regularly, and there is a lively exchange of experiences and ideas amongst the members. In this way it is also possible to find many new friends amongst the like-minded all over the world.

One could write a great deal more to describe in detail the activities of amateur shortwave listeners, but this would go too far for an article like this one.

The **World Radio TV Handbook**—which must not be absent from any receiving station—contains all required details, which is why I can strongly recommend the same to you.

With 73's and good DX wishes
Bühler, Anthon
Luzern, Switzerland.

A MESSAGE FROM THE EDITOR

This 23rd edition of the **WORLD RADIO TV HANDBOOK** has been extended and kept up-to-date with the advice of specialists and consultants in the field of radio and television in order to assist **you** to obtain as complete and practical information as possible about the various radio and TV stations throughout the world.

It has been our aim with the present edition to enable everyone to have a complete and practical basis on which to start or continue listening to broadcasts (on shortwave in particular) from near and far-away countries and thus create the possibility for a better international understanding.

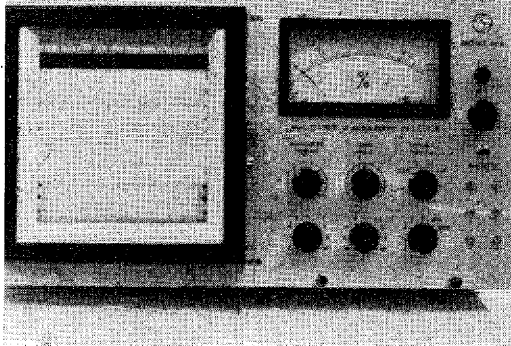

It would be impossible to list all the names of those whom we have consulted about the new material—friends who have made valuable contributions to this book. We thank them for their help and interest in our work.

I want to thank specifically the many broadcasting and TV organisations, radio clubs, advertisers, DX-ers and other individuals, who have made this edition possible.

The **WRTH 1969** has been written and compiled for **you** entirely. Consequently we will be more than happy to receive your criticism and suggestions with regard to improving and extending the contents of the current edition.

J. M. Frost
Editor

PEAK MODULATION LEVEL MONITOR

Recently Approved by

**R.A.I.
ITALIAN
BROADCASTING
SYSTEM**

Monitoring the peak modulation level of a sound program, permits to:

- avoid excessively high levels which cause distortion in the transmission chain.
- avoid excessively low levels which can cause bad reception in fringe areas.
- avoid disparity of sound level between different kinds of programme material, which compell the listener to make continual volume adjustment on his receiver.

Features

- full scale deflection for 100 mV rms minimum signal
- two knobs input attenuator
- time of analysis adjustable from 0.5 to 30 sec.
- internal time constants of 0.025—1—4 msec. for the exclusion of fast transient.
- additional time constants can be obtained connecting an external capacitor...
- flat frequency response from 50 to 15.000 cycles
- six adjustable levels which can be set on the scale of the instrument
- fully transistorized with extensive use of integrated circuits.

HOW TO USE THE WORLD RADIO TELEVISION HANDBOOK

The World Radio TV Handbook is designed to help the international radio listener obtain maximum enjoyment from his receiver.

The first section of the Handbook contains instructive articles relating to broadcasting, information regarding broadcasting and television organizations, and popular technical articles and tables of practical value to listeners.

The main section of the book (pages 79-245) contains detailed information, by country, of the **Radio Stations** and broadcasting organizations of every country in the world, including names and addresses of broadcasting companies, names and titles of leading officials, lists of broadcasting stations in each country, including frequencies, wavelengths, transmitter power, call signs (if used), and station names. Program information is also listed, including times, frequencies, and beam areas of the broadcasts in each language. The announced **location** of the st., rel. st's etc., is usually the studio and administrative location, since the tr's are often located in outlying areas. — **Power** is stated in kilowatt (kW) or Watt (W). When two powers are listed, the figures represent the lower and upper limits of power, where a station uses more than one tr. on the frequency at different times (s.w.) or varies the power of the tr. for day and night operation (m.w.).

A **listing by frequency and wavelength** of the shortwave stations of the world, and long and medium wave stations by continents is presented in the last part of the Handbook, for use in facilitating the identification of stations.

Abbreviations: See page 46 for explanation.

Short-wave stations may be used either for domestic broadcasting to listeners in the same country or for international broadcasting directed to listeners in other countries.

International short-wave stations usually employ directional antennas to beam their programs to particular areas on frequencies calculated for best reception. Most international broadcasts are scheduled for the evening hours in the intended reception area, but some are in the morning or at other times during the day. The reception areas give their names to the services: European Service (or to Europe), Far Eastern Service (or to Far East), North American Service (or to North America) etc. Languages employed are those of the listeners in the area to which the broadcast is directed, also the language of the transmitting country for reception by persons understanding that language.

Best reception is usually obtained from transmissions directed to your area. However, there is a considerable amount of overlapping between many service areas and, therefore, it is often possible to obtain good reception of programs beamed to adjacent areas, and sometimes, even of programs directed to distant parts of the world. Short-wave propagation conditions change continually because of the influence of daylight and darkness, seasonal effects and solar activity. Consequently, good reception requires frequency change from time to time.

(See articles: "Radio Broadcast Reception Conditions", "Solar Activity", on the respective pages).

Domestic short-wave stations are usually of lower power than international stations, and generally use non-directional or wide beam antennas, in order to reach local or national audiences. These stations make fewer seasonal frequency changes, and many operate on the same channel for both day and night operation. The stations are utilized to reach areas of a country where coverage by medium and long wave stations is not adequate.

The geographical Co-ordinates of the transmitter sites are given in degrees and minutes.

Long and Medium wave stations are used mainly for transmitting programs to listeners in the country in which the stations are located. These stations vary from powerful transmitters capable of being heard throughout the country to low power stations intended only for a small area in the vicinity of the transmitter.

FM (Frequency Modulation) Stations operate on very high frequencies (VHF); ranges of 88-108 MHz in the Americas and 87-100MHz in other areas, and provide interference free reception over a short radius. Most FM stations relay programs of a medium or long wave station.

Frequency and Wavelength — Frequencies are measured in kilohertz per second (kHz) and megahertz per second (MHz). One hertz (named after the German physicist Heinrich Hertz) signifies "one cycle per second" and accordingly, one kilohertz (kHz) equals one kilocycle per second (kc/s). Wavelengths are measured in meters.

A formula between frequency and wavelength is as follows:

$$\text{Wavelength (m)} = \frac{300000}{\text{Frequency (kHz)}}$$

$$\text{Frequency (kHz)} = \frac{300000}{\text{Wavelength (m)}}$$

Several broadcasting stations announce frequencies in kilocycles or megacycles. A kilocycle is 1000 cycles. A megacycle is 1000 kilocycles.

Due to the propagational conditions, interference by other stations, jamming, malfunction of transmitter, reallocation of frequencies by a country or convention, or for some other reason, stations may use frequencies which are at variance with the frequency(ies) indicated in this handbook.

Beams: The azimuth of maximum radiation of the transmitting antenna is given in degrees (clockwise) from True North, where such details are given by the respective stations.

Program times used in the listings are based on the 24 hour clock. Midnight is 00.00 hours, 3 a.m. is 03.00 hours, 9 a.m. is 09.00 hours, and midday is 12.00 hours. Then, instead of starting another 12 hour cycle (p.m.), under the 24 hour system the hours increase until midnight. Thus 3 p.m. is 15.00 hours, 10 p.m. is 22.00 hours, and so on until 23.59 (11.59 p.m.) is reached and a new 24-hour cycle starts. This system eliminates any confusion between times a.m. and p.m.

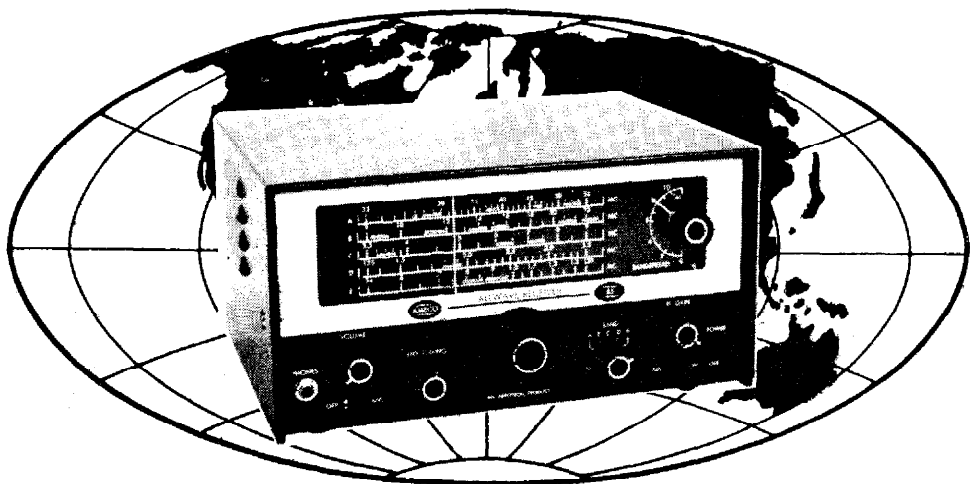

Time Conversion: All programs are listed in GMT (Greenwich Mean Time). To convert from GMT to your local time, refer to the World Time Table on page 53 to determine how many hours your time is ahead or behind GMT, and add or subtract that amount in order to convert to your clock time. For quick conversion, it is useful to write the GMT hours, 00 to 24, down on one side of a sheet of paper, and then enter the correct local time opposite each GMT hour. Summertime or Daylight Saving time, adds an hour to local time so this should be taken into account in countries where it is utilized.

Program schedules: The program schedules of many countries are divided into Home Services and Foreign Services. The Home Service programs are arranged by language and by program services or networks. The Foreign Service transmissions are generally arranged by beam area, and by language for each beam area. The times and frequencies of the programs in each language are listed together, in order to facilitate the determination of the times and frequencies of the broadcasts in each language.

(continued page 15)

AMECO

NEW ALL WAVE RECEIVER

MODEL R-5

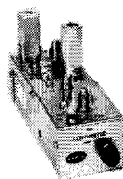

FOR SHORT WAVE LISTENING

An exceptionally fine receiver for the short wave listener and amateur operator. Covers .54 Mc. through 54 Mc. in five continuous bands. This includes the standard broadcast band, all foreign broadcast bands, all amateur bands from 160 through 6 meters, all 27 Mc. CB channels, all 2-way radio frequencies from 30 to 50 Mc. including many police and fire departments. Fully transistorized, has a built-in power supply for AC operation and with optional accessory may also be used for portable operation on internal batteries or 12-volt automobile battery.

- Continuous coverage .54 to 54 mc.
- Fully Transistorized
- Includes 30 to 50 mc. police bands
- AC and portable*
*optional
- Includes 6 meter ham band
- Noise limiter
- Includes Beat Frequency Oscillator
- Band Spread

Also available:

A complete line of pre-amplifiers, converters, code practice oscillators and other accessory items for the amateur and short-wave listener.

**PREAMPLIFIER****CONVERTER****CODE PRACTICE

Therefore, if you wish to hear a broadcast in a particular language from a country, refer to the listing for the country of the time and frequency of broadcasts in that language. Most broadcasts are transmitted on more than one frequency, so try the various frequencies listed, to determine which one is received best at your location!

Identification of Stations: Most stations in Europe, Middle East, Africa and Asia identify by announcing their station name and location. Most stations in North America and Pacific (incl. Australia/New Zealand) identify by the use of a call sign of 3 to 5 letters of a combination of letters and figures, of which the first, or first 2, denote the nationality in accordance with the international list of prefixes. Most stations in Latin America use a call sign (sometimes not frequently announced), a station name, and location.

In addition, many stations use musical interval signals at sign on and between programs, in order to help listeners to find the station on their dial and identify it as the desired station. These interval signals are included in the country listings.

How to identify a Station by Frequency or Wavelength: When you hear a station that is unknown to you, first try to determine some clue to its identity by attempting to determine the language, noting the type of program, etc. Then, note the approximate frequency or wavelength indicated on your dial, and turn to the table "Short-wave Stations of the World" in the back of the Handbook, and ascertain what stations operate in that vicinity. Next, check the program listings to determine which of the stations are scheduled to operate at that time of day, and which are most likely to be audible at your location, depending on the power and distance away. For definite confirmation, it is desirable to wait for station announcement or interval signal.

Frequency Changes: The frequencies listed are those which were scheduled for use at the time of publication. However, due to a number of reasons, including interference and changes in propagation conditions, it may be necessary for a country to make frequency changes. Often only one of the frequencies on a program will be changed, so the new frequency can be determined by tuning in the other frequencies and listening for the announcement of the frequencies being used. Reference to a publication listing the latest frequency changes for the International Stations: the **Summer-Edition to the WRTH** (published by mid-June each year).

Interference: Due to the present crowded condition of the medium and short wave broadcasting bands, interference may be encountered from other stations operating on the same or closely adjacent frequency. In addition to interference from other broadcast stations, there may also be interference from "Jammers", which transmit a variety of noises in an attempt to prevent certain foreign broadcasts from being heard in the country operating the jammers. When interference is encountered, try another of the listed or announced frequencies, if several are in use, or try a broadcast at another time.

Reception from Hard-to-Hear Countries: If you wish to hear a station or program from a particular country, refer to the listing from that country, determining first whether it has any broadcasts beamed towards your area or adjacent areas, if not, refer to the frequency, time and power listing to determine where and when reception might be possible. Also, note the bands and times when

stations in other countries in that part of the world are audible. It is possible to hear many far distant stations, even if they do not beam programs to your area, by listening when the propagation and clearness of channel conditions are favourable.

Verification by QSL-cards: As indicated in the program listings for the various countries, many stations are interested in receiving reports from listeners about their transmissions. These stations acknowledge reports by sending listeners a QSL-card (verification) or letter. Most international broadcasting stations do not require enclosure of return postage and will reply with a QSL card or letter. Domestic broadcasting stations do not normally request reports from foreign listeners, so return postage should be sent with reports to these stations. Return postage should be sent in the form of an International Reply Coupon (IRC), obtainable at post offices in most countries. Reports should be sent to the station address given in the country listings. They can be written in English in most cases, but Spanish is preferred by South and Central American stations.

Reception reports are useful to radio engineers in selecting the most suitable frequencies for broadcasts beamed to your area. Reports are preferred in the SINPO code, which is as follows:

S (Signal Strength)	I (Interference)	N (Noise)	P (Propagation Disturb)	O (Overall Merit)
5 excellent	5 nil	5 nil	5 nil	5 excellent
4 good	4 slight	4 slight	4 slight	4 good
3 fair	3 moderate	3 moderate	3 moderate	3 fair
2 poor	2 severe	2 severe	2 severe	2 poor
1 barely aud.	1 extreme	1 extreme	1 extreme	1 unusable

Information about **Television Stations** is provided in the section following the radio section, including names and address of Television companies, location, power and channel of Television stations, and program schedules of these stations.

With reference to the first Television page we give a short explanation of some of the technical words and figures mentioned—The announced **location** of the station is usually the studio location, since most TV tr's are situated upon the highest location in the area in order to obtain more widespread coverage — Two systems of **modulation** are used to transmit the audio signal of the TV st's either frequency modulation (FM) or amplitude modulation (AM). All video transmissions are normally amplitude modulated — **Polarization** signals are horizontally polarized (H) or are vertically polarized (V). Polarization is usually selected according to the need for a reduction of interference with other stations, or to obtain engineering standards required by the government of the country in which the st. is located — The **band width** is shown in MHz and represents the limits within which both the video and audio tr. are contained — **Number of lines** transmitted express the number necessary to form one complete frame or picture, and **frames** state the number of times per second the picture area is completely scanned — **Video and Audio Power** is indicated in kilowatt (kW) or Watt (W). In the most cases the figures denote the effective radiated power (ERP) due to the stations antenna system — **Video and Audio Frequency** is stated in MHz per sec. The relationship between the quoted figures and the limits of the video band varies among countries and can be determined by reference to the standards of the systems used by the respective countries.

EUROVISION
Secret. Administrative Office, Department of Legal Affairs: 1, rue de Varembe, CH-1211 Geneva 20, Switzerland.

Technical Centre: 32, av. Albert Lancaster, Brussels 18, Belgium.
Receiving and Measuring Station: Jurbise (Belgium).

Eurovision Control Centre: Palais de Justice, Brussels, Belgium.

Administrative Council: President: J. B. Broeksx, NTS-NUU (Netherlands), Vice-Presidents: W. Hess (ARD, German Fed. Rep.), Dr. I. Pustisek (JRT, Yugoslavia).

Administrators: Representatives of broadcasting organisations in: France, Germany (Fed. Rep.), Italy, Netherlands, Norway, Spain, Sweden, Switzerland, Tunisia, United Kingdom (BBC) and Yugoslavia.

Directors: Director, Administrative Office: H. Hahr, Director of Legal Affairs: G. Straschnov, Director of Technical Centre: G. Hansen.

Active Members: Broadcasting organizations in: Austria, Belgium, Denmark, Finland, France, German Fed. Rep. (ARD, ZDF), Greece, Iceland, Ireland, Israel, Italy, Lebanon, Luxembourg, Monaco, Netherlands, Norway, Portugal (ENR, RTP), Spain, Sweden, Switzerland, Tunisia, Turkey, United Kingdom (BBC, ITA/ITCA), Vatican State, Yugoslavia.

Associate Members: Broadcasting organizations in: Algeria, Australia (ABC, Federation of Australian Commercial Television Stations), Brazil (Associação Brasileira de Emisoras de Rádio e Televisão, Diários Associados Ltda, Emissores Unidas de Rádio e Televisão), Canada (CBC), Ceylon, Chad, Congo (Kinshasa), Costa Rica, Cyprus, Dahomey, Gabon, Ghana, Honduras, Iran, Ivory Coast, Japan (NAB, NET, NHK, NTNC, TBS), Kenya, Kuwait, Liberia, Malawi, Malta, Mexico, Morocco, New Zealand, Niger, Nigeria, Pakistan, Peru, Rep. of South Africa, Rhodesia, Tanzania, United States (ABC, CBS, NAEB, NBC, NET, Time-Life Broadcast Inc., US Information Agency), Upper Volta, Venezuela.

Publications: EBU Review — every month in English and French, published in two separate parts: A (Technical) and B (General and Legal) — Lists of European stations (long and medium waves, VHF sound broadcasting, and television) — General, Legal and Technical Monographs — Reports of seminars on educational television.

INTERNATIONAL RADIO AND TELEVISION ORGANISATION (OIRT)

Addr: 15, U Mrazovský, Prague 5, Czechoslovakia. Cable: Interadif, Praha.

Nature: International Organization dealing with practical and theoretical questions connected with broadcasting and television prgr's and technique and cooperation between broadcasting and television organizations.

Governing Body: General Assembly consisting of one representative for each active member.

Administrative Council: Consisting of 7 to 13 members. Acting Chairman for 1968-69: Reginald Grimmer, First Vice-President of the State Broadcasting Committee of the German Democratic Republic. Vice Chairman for 1968-1969: B. Nonev, General Director of the Bulgarian Radio and TV, and a representative of the UAR Broadcasting Corporation.

Members: Bulgarian People's Rep, Chinese People's Rep, Czechoslovak People's Rep, German Democratic Rep, People's Rep. of Hungary, People's Dem. Rep. of Korea, United Arab Rep, Union of Soviet Socialist Rep, Moldavian SSR.

OIRT-Members: Radio and Television Organizations of: People's Rep. of Albania, Algeria, Belorussian SSR, People's Rep. of Bulgaria, Chinese People's Rep, Rep. of Cuba, Czechoslovak People's Rep, United Arab Rep, Estonian SSR, Finland, German Democratic Rep, Hungarian People's Rep, Iraq, Korean People's Democratic Rep, Latvian SSR, Lithuanian SSR, Rep. of Mali, Moldavian SSR, People's Rep. of Mongolia, People's Rep. of Poland, Rumanian Socialist Rep, Sudan, Ukrainian SSR, Union of Soviet Socialist Rep, People's Democratic Rep. of Vietnam.

Facilities: Administrative Office and technical Centre, Prague, Czechoslovakia.

Specialised Commissions: Technical Commission: Chairman: Z. Zherkov (Bulgarian People's Rep.), Radio Prgr. Commission: Chairman: W. Sokorski, President of the Polish Radio and TV Committee. Television Prgr. Commission and Intervention Council: Chairman: G. A. Ivanov, Vice-President of the Radio and TV Committee of the USSR.

Publications: Review of the International Radio and Television Organization (OIRT) "Radio and Television" in English-French, Russian and German, issued every two months. Monthly OIRT Information, and quarterly Catalogues; radio prgr's suitable for exchange.

Meetings: General Assembly every two years. Administrative Council every year.

Relations with all important organizations active in the field of radio and television.

INTERNATIONAL TELECOMMUNICATION UNION

Addr: Place des Nations, 1211 Geneva 20, Switzerland. Te: 347000, 348000. Telex: 23000.

Administrative Council: Algeria, Argentina, Australia, Brazil, Canada, China, Dahomey, Ethiopia, Federal Rep. of Germany, France, India, Ireland, Italy, Japan, Lebanon, Malagasy Rep, Mexico, Morocco, Nigeria, Pakistan, Poland, Saudi Arabia, Switzerland, Uganda, United Kingdom, United States of America, USSR, Venezuela, Yugoslavia.

Membership (135 members as at 21 August 1968): Afghanistan, Albania (People's Rep. of), Algeria (Dem. and Popular Rep. of), Saudi Arabia (Kingdom of), Argentine Rep, Australia (Commonwealth of), Austria, Barbados, Belgium, Bielorussian SSR, Burma (Union of), Bolivia, Botswana (Rep. of), Brazil, Bulgaria (People's Rep. of), Burundi (Kingdom of), Cambodia (Kingdom of), Cameroon (Federal Rep. of), Canada, Central African Rep, Ceylon, Chile, China, Cyprus (Rep. of), Vatican City State, Colombia (Rep. of), Congo (Dem. Rep. of the), Congo (Rep. of the) (Brazzaville), Korea (Rep. of), Costa Rica, Ivory Coast (Rep. of the), Cuba, Dahomey (Rep. of), Denmark, Dominican Rep, El Salvador (Rep. of), Ecuador's represented by the French Overseas Post and Telecom. Agency, Terr. of Spain, USA, Ethiopia, Finland, France, Gabon (Rep.), Ghana, Greece, Guatemala, Guinea (Rep. of), Guyana, Haiti (Rep. of), Upper Volta (Rep. of), Honduras (Rep. of), Hungarian People's Rep, India (Rep. of), Indonesia (Rep. of), Iran, Iraq (Rep. of), Ireland, Iceland, Israel (State of), Italy, Jamaica, Japan, Jordan (Hashemite Kingdom of), Kenya, Kuwait (State of), Laos (Kingdom of), Lebanon, Lesotho (Kingdom of), Liberia (Rep. of), Libya (Kingdom of), Liechtenstein (Principality of), Luxembourg, Malaysia, Malawi, Maldives Islands, Malagasy Rep, Mali (Rep. of), Malta, Morocco (Kingdom of), Mauritania (Islamic Rep. of), Mexico, Monaco, Mongolian People's Rep, Nepal, Nicaragua, Niger (Rep. of the), Nigeria (Federal Rep. of), Norway, New Zealand, Uganda, Pakistan, Panama, Paraguay, Netherlands (Kingdom of the), Peru, Philippines (Rep. of the), Poland (People's Rep. of), Portugal, Spanish Prgr. in Africa, Portuguese Overseas Provinces, Syrian Arab Rep, United Arab Rep, Federal Rep. of Germany, Federal Socialist Rep. of Yugoslavia, Ukrainian SSR, Somali Rep, Rhodesia, Rumania (Socialist Rep. of), United Kingdom of Great Britain and Northern Ireland, Rwanda (Rep. of), Senegal (Rep. of the), Sierra Leone, Singapore, Sudan (Rep. of the), South Africa (Rep. of) and Territory of South West Africa, Southern Yemen (People's Rep. of), Sweden, Switzerland (Confederation), Tanzania (United Rep. of), Chad (Rep. of the), Czechoslovak Socialist Rep, Territories of the USA, Overseas Terr. for the International relations of which the Gov. of the UK are responsible, Thailand, Togolese Rep, Trinidad and Tobago, Tunisia, Turkey, Union of Soviet Socialist Rep, Uruguay (Oriental Rep. of), Venezuela (Rep. of), Vietnam (Rep. of), Yemen, Zambia (Rep. of).

UNESCO

(United Nations Educational, Scientific and Cultural Organisation).

Addr: Place de Fontenay, Paris 7, France.

L.P. Dir. Gen: René Maheu. Asst. Dir. Gen. for Communication: Tor Gjesdal.

OFFICE OF PUBLIC INFORMATION:

Radio and Visual Information Division: Chief: H. R. van Stuwé, Deputy Chief: Gerald S. Wade — Regional Units: Anatoli Bolgarov (Russian language production), Jean Calvet (French language production), Rex Keating (English language production), Luis Lopez Alvarez (Spanish language production). Film and TV Officer: Jean S. Bhowanary.

MASS COMMUNICATION DEPARTMENT: Dir: William Farr. Division of Development of Mass Media: Dir: Pierre Navaux. Division of the Use of Mass Media for Out-of-School Education: Chief: Henry R. Cassirer.

UNION OF NATIONAL RADIO AND TELEVISION ORGANISATIONS OF AFRICA (URTNA)

Headquarters (Administrative and Programme Exchange Centre): Boite Postale 3237 (or 101, Rue Carnot), Dakar, Sénégal. Te: 210-15.

Cable: URTNA, Dakar.

Technical Centre: Boite Postale 39 (or 8, Avenue de la Marne), Bamako, Mali. Cable: URTNA, Bamako.

L.P.: Pres: D. Amiot-Priso (Cameroon). Vice Pres: G. Sidikou (Niger) Sec. Gen: M. Bassiouni (Sénégal). Dir. of Technical Center: A. H. Antar (Mali). Administrators: Representatives of the Broadcasting Organisations in Cameroon, Chad, Congo-Brazzaville, Ghana, Ivory Coast, Niger, Nigeria & Sénégal).

Publications: A quarterly Newsletter.

URTNA consists of full and associate members, hence the difference lies with the eligibility for membership.

Full Members: each independent African State may be represented by its National Radio and Television Organisation, which enjoys full membership. African Countries fighting for independence and recognized by the organisation of African Unity may be admitted as full members.

Associate Members: a non-African National Radio and Television Organization may be admitted in the Union as an associate member.

Administrative Council: the Common practice in other Broadcasting Unions is that one seat on the Administrative Council belongs as of right to the full member of the Country where the seat of the Union is established, however, in URTNA one seat belongs to Sénégal where the seat of the Union is, and one to Mali where the seat of the Technical Center is.

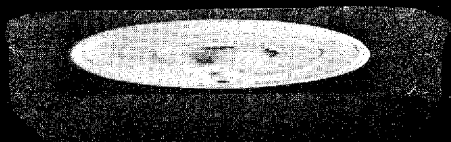

Official languages: Arabic, English, French.

The ABU is a Union of national broadcasting organisations in the Asian/Pacific region which was formally established on 1st July 1964, following five Asian Broadcasters' Conferences held between 1957 and 1963 in Tokyo, Kuala Lumpur and Seoul. The first annual General Assembly of the ABU was held in Sydney in November 1964 and was attended by delegations from 27 members. Succeeding General Assemblies were held as follows: 1965, Tokyo; 1966, Taipei; 1967, Singapore; 1968, New Delhi. Administrative Council meetings, the first of which was held in Tokyo in June 1966, have been held successively in Tokyo, Taipei, Bangkok, Singapore, Seoul and New Delhi.

Publications: ABU Newsletter (Monthly in English).

UNITED NATIONS

Address: United Nations, New York 10017, USA.

COMMONWEALTH BROADCASTING CONFERENCE

Members: All India Radio, Australian Broadcasting Commission, British Broadcasting Corporation, Canadian Broadcasting Corporation, Caribbean Broadcasting Corporation, Ceylon Broadcasting Corporation, Cyprus Broadcasting Corporation, Ghana Broadcasting Corporation, Jamaica Broadcasting Corporation, Lesotho Broadcasting Corporation, Malawi Broadcasting Corporation, Malta Broadcasting Authority, Mauritius Broadcasting Corporation, New Zealand Broadcasting Corporation, Nigerian Broadcasting Corporation, Radio Botswana, Radio Gambia, Radio & Television Malaysia, Radio Pakistan, Radio Sierra Leone, Radio & Television Singapura, Radio Tanzania, Radio & Television Uganda, Voice of Kenya, Zambia Broadcasting Services.

Associate Member: Radio Hong Kong.

Established in 1945, the Conference is a standing association of the national public service broadcasting organizations which are responsible for the planning and presentation of the broadcast programmes of independent Commonwealth countries. Holding in common the belief that broadcasting is a public trust, the member organizations are professionally committed to the establishment and extension of national radio and television services as a means of information, education and entertainment. The principal purpose of the Conference is the professional improvement through collective study and mutual assistance, of the broadcast programmes of the member organizations, and of the technical facilities for their transmission and reception. The intensified and sustained training of professional broadcasting staff, in the fields both of programming and engineering, in support of these ends, is a continuing practical concern of the Conference which, at its Sixth Meeting (Nigeria, 1965) established a permanent Study Group on Training to further this work.

Secretariat: 78 Zwaluwlaan, Bussum, the Netherlands. (Te: 02159-10005 — Office for USA: 380 Lexington Avenue, Suite 303, New York City, N.Y., U.S.A. 10017 (Te: 212 — MU 2-4500).

There are three main types of membership.

i) Corporate, (ii) Personal and (iii) Free exchange. Corporate membership is open to every radio and television station in the world as well as related industries. Personal membership is open to anyone in any way concerned with radio and or television broadcasting. Free Exchange Membership is offered to every association and federation in the world in any way concerned with serving broadcasting interests. Governing Body: The IBS is governed by a Board of Directors elected by the membership. There are sixteen seats on the Board.

Relations: The Society has registered members from more than a hundred nations, including an exchange of memberships with a number of national and international associations.

Status: The society is registered with l'Union des Associations Internationales, in Brussels, as a non-governmental and non-legislative organization. The Society is a legal corporate body under the laws of the Netherlands.

ASOCIACION INTERAMERICANA DE RADIODIFUSION (AIR)

AIR is an association of the broadcasting corporations of the American countries. Founded in 1946 it represents more than 5000 broadcasting and 400 television stations.

May we keep you informed about all new WRTH Editions and Supplements. For free mailing of brochures covering all our future editions send a postcard to us today stating complete name and address.

FROM 10 W to 100 KW...

OFFERS THE COMPLETE AM-FM TRANSMITTER LINE

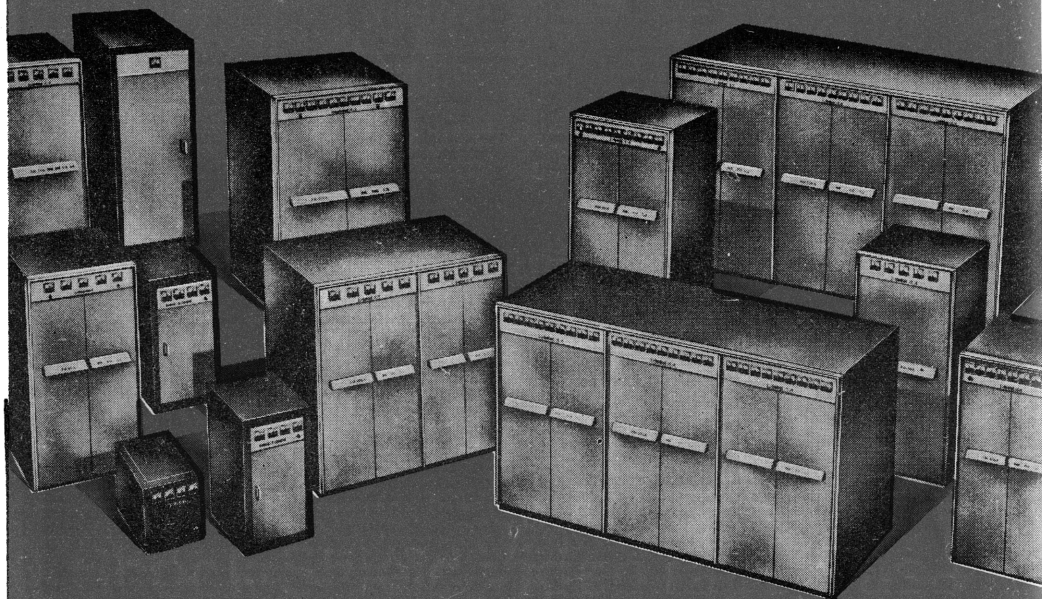

Complete? That's right! With sixteen different transmitters . . . from 250 W to 100 KW in AM and from 10 W to 40 KW in FM . . . AEL has the line that meets *your* broadcast requirements.

And right down the line, AEL transmitters meet your specs with down-to-earth prices and state of the art design features that guarantee better sound; easy, one-button operation; reliable, long-term performance; long tube life; low power consumption; and a

minimum of service and maintenance.

Silicon power supplies are protected by automatic recycling, fast-operating overload relays. Inexpensive tube complements. Designed for remote control operation. Running-time meters are standard.

For complete specifications on AEL's complete line of AM and FM broadcast and HF transmitters, write today. Or cable: AMERLAB, Lansdale (Penn., U.S.A.).

FM TRANSMITTERS FROM 10 TO 40,000 WATTS / AM TRANSMITTERS FROM 250 TO 100,000 WATTS

EUROVISION IN 1968

By J. Treeby Dickinson,
Chief Engineer, Technical
Centre of the E.B.U.

It has become customary, in these annual reports on the evolution of Eurovision, to begin by noting the number of international television transmissions planned and supervised by the E.B.U. during the year in question. Inevitably such figures tell only part of the story, as in parallel with the increase in the scale of Eurovision activity, there has been a continuous widening of its scope, as new facilities have become available—the spectacular development of communication satellites is perhaps the most significant of them. Each year one wonders how far we are from saturation, and readers may be interested to study the graph, reproduced here from the E.B.U. Review, showing the trend of the number of transmissions since the early days of Eurovision (Figure 1). This graph is not a purely academic exercise. The E.B.U. has to be prepared to meet its Members' requirements for transmissions of all kinds, notably for the growing accent on news transmissions—although there are now two general exchanges of news daily, short-notice "flash" news-items still frequently occur.

Growth of the annual number of Eurovision transmissions
Figure 1.

The Eurovision Control Centre (EVC) in the Law Courts in Brussels is now causing serious concern. It is true that the centre, which was initially built and equipped in 1955, has several times been enlarged and its equipment has been continuously improved and extended, and thus adapted to the changing operational requirements—most recently to cover monitoring and measurements for the PAL, SECAM and NTSC colour systems. In addition, work is proceeding on the design of an automatic-telephone installation to ensure a more rational utilisation of the leased network, but a satisfactory solution must await the transfer of the EVC to a tower now being built at the new Production Centre of the R.T.B./B.R.T. in Brussels, which will become the nodal point of the television radio-relay system. There, in much more spacious accommodation, it will be possible to arrange the equipment much more conveniently and at the same time to provide more comfort for the staff.

Regarding the Eurovision Network itself, and although it had little, if any, effect that could be seen immediately by the ordinary viewer, one of the most important developments took place on 1st January, 1968 when an

agreement for the lease on an annual basis of some of the most frequently used international vision circuits came into effect, hitherto all international vision circuits having been rented individually for each transmission. The benefits from the new arrangement, the first of its kind in the world, are twofold. First, the continuous availability of these circuits obviates any risk of unnecessary delay in the transmission of "flash" news items. The centralised system of allocating circuits provides immediate knowledge of the availability of each of them, without the necessity to confirm all bookings with the national Telecommunication Administrations in advance. Secondly, the financial advantage is that increased utilisation entails additional charges only for any extension circuits which may be needed. It also makes it possible to arrange regular complete measurements and adjustments of the circuits, instead of the short tests which are all that can be done when circuits are leased for each transmission individually.

This network of circuits, commonly known as the Eurovision Permanent Vision Network, is illustrated in Figure 2. It can be seen that it connects most of the points which were already reached by the sound-programme circuits forming the Eurovision Permanent Sound Network. Most sections of the two Permanent Networks thus provide high-quality facilities for television programme transmissions, due to the test transmissions that can now be performed at no extra charge. The experience which has already been obtained with the Permanent Vision Network has demonstrated its value, and plans for its extension, where the rate of utilisation justifies it, are already under discussion.

A new facility which became available during 1968 was a vision junction in each direction between the West German and Czechoslovak networks, thus providing a very convenient link between the Eurovision and Intervention networks.

As in earlier years, the programme category which accounted for the longest global circuit-time in 1968 was sport. The main events were, of course, the Olympic Games; first the Winter Games at Grenoble and in October, the Summer Games in Mexico. In both cases, a high proportion of the transmissions was in colour: about 56% in the case of Grenoble and about 85% in the case of Mexico City. Both operations involved transcoding, the Grenoble Games having been originated in SECAM colour and the Mexico City Games in NTSC colour, whereas the general distribution over the Eurovision Network has to be in PAL colour. The number of sound transmissions from these events also set new records; Figure 3 shows some of the equipment used at Grenoble for this purpose.

Broadcasts of professional sporting events too, were also distributed widely, cycling and football being the most popular.

Probably the most widely-received transmissions of a single non-sporting event were those of the coverage in colour of the Pope's visit to Colombia in August, managed jointly by E.B.U. Members: the T.V.E. and the RAI, with the assistance of the Instituto Nacional de Radio y Televisión of Colombia. This involved the use of a transportable Earth-station with a 5-metre aerial installed near Bogotá, and a colour outside-broadcast vehicle belonging to the RAI. These transmissions were the first to be broadcast in Europe live from South America, the satellite used being ATS-3.

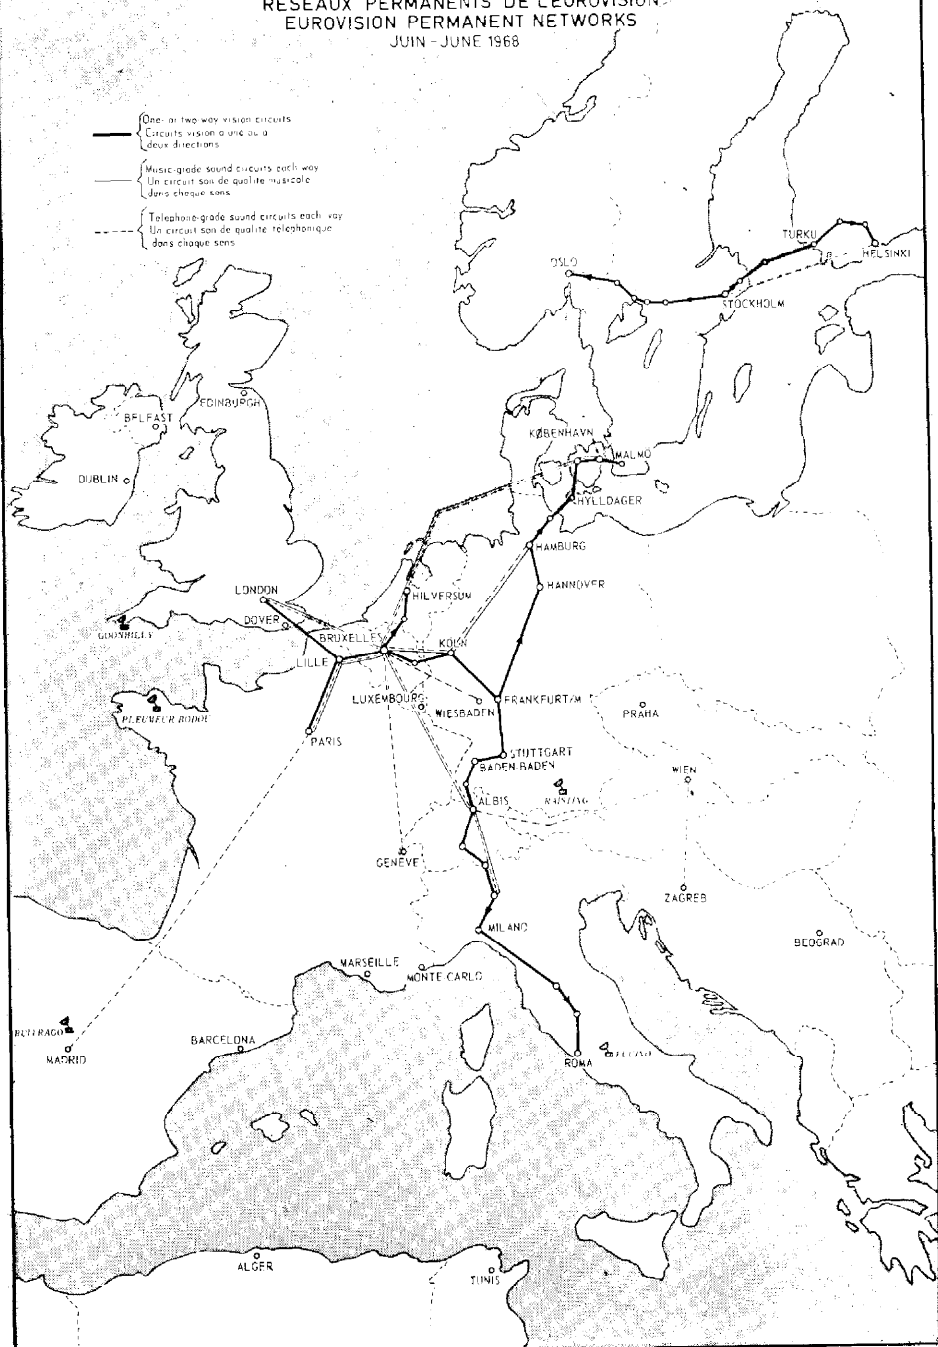

Large audiences were also reported for many of the specially produced entertainment programmes making use of the Eurovision facilities on a large scale. The best-known of these, of course, is the Eurovision Song Contest, which was held in London this year, and which was won by the T.V.E., in an excitingly close finish.

Sub-centre catering for 25 commentators at the Winter Olympic Games at Grenoble.

Perhaps the most remarkable feature of 1968, as far as Eurovision was concerned, was the increase in the daily news-exchange operation (see Figure 4). Much of this was due to the large number of newsworthy events, among which the most outstanding must be the strikes in France in May and the invasion of Czechoslovakia in August. In both cases, the immediacy of the pictures distributed by Eurovision—sometimes at considerable personal risk to the staff of the originating services—was highly appreciated by viewers, and it would not be an exaggeration to say that the course of events was influenced by the visual impact of these transmissions. The significance of the existence of the Permanent Networks in the efficient coordination of these exchanges has already been mentioned; the following statistics in all classes of programmes indicate how great the increase has been.

During 1967, 2086 transmissions were coordinated by the E.B.U. Technical Centre; this represents an increase of 13% over the previous year, and the total duration was 1190 hours, an increase of approximately 4%. Figures for the whole of 1968 are not available at the time of writing, but during the first six months of this year, 1402 transmissions with a total duration of 815 hours have been coordinated, corresponding to increases of 72% and 51%,

European Broadcasting Union Eurovision — Television News Service

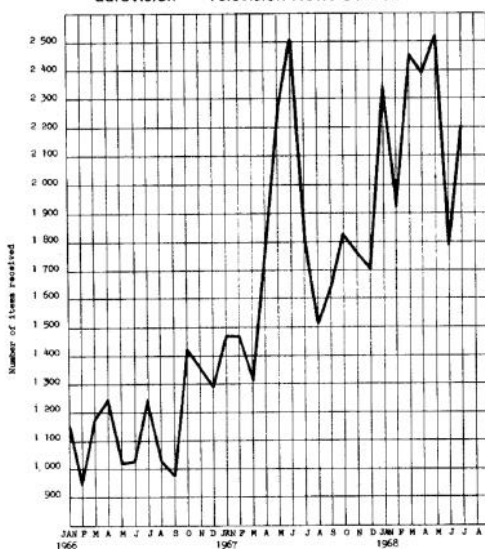

Figure 4.

respectively. These totals do not include the figures for the regular Daily News Exchange, which has taken place twice daily since the start of 1968. In 1967, 2009 news items were distributed, each being taken by an average of 10.5 television services. In the first six months of 1968, the number of items distributed reached 1243.

It is now generally recognised that Eurovision, although remaining essentially European in spirit, has extended its scope to practically the whole of the world, to say nothing of its brief excursions into outer space. Our efforts over the next few years will be concentrated on the task of providing immediate television coverage of news and topical events, whenever and wherever they may occur. This will require the solution of formidable problems on the technical plane, not only in transmitting the programme signals, but also in getting the cameras to work at the right place at the right time, which implies the use of much handier and more quickly installed camera equipment than as yet generally available. How the technique of communication satellites will be exploited to solve the transmission problem is related in another article in this Handbook.

THE EUROPEAN DX COUNCIL

will discuss DX-matters of common interest and make their achievements public in the form of recommendations. The members of the Council are European countries and the DX organizations of these countries choose their representatives to the **Council** and to the various **Working Committees**.

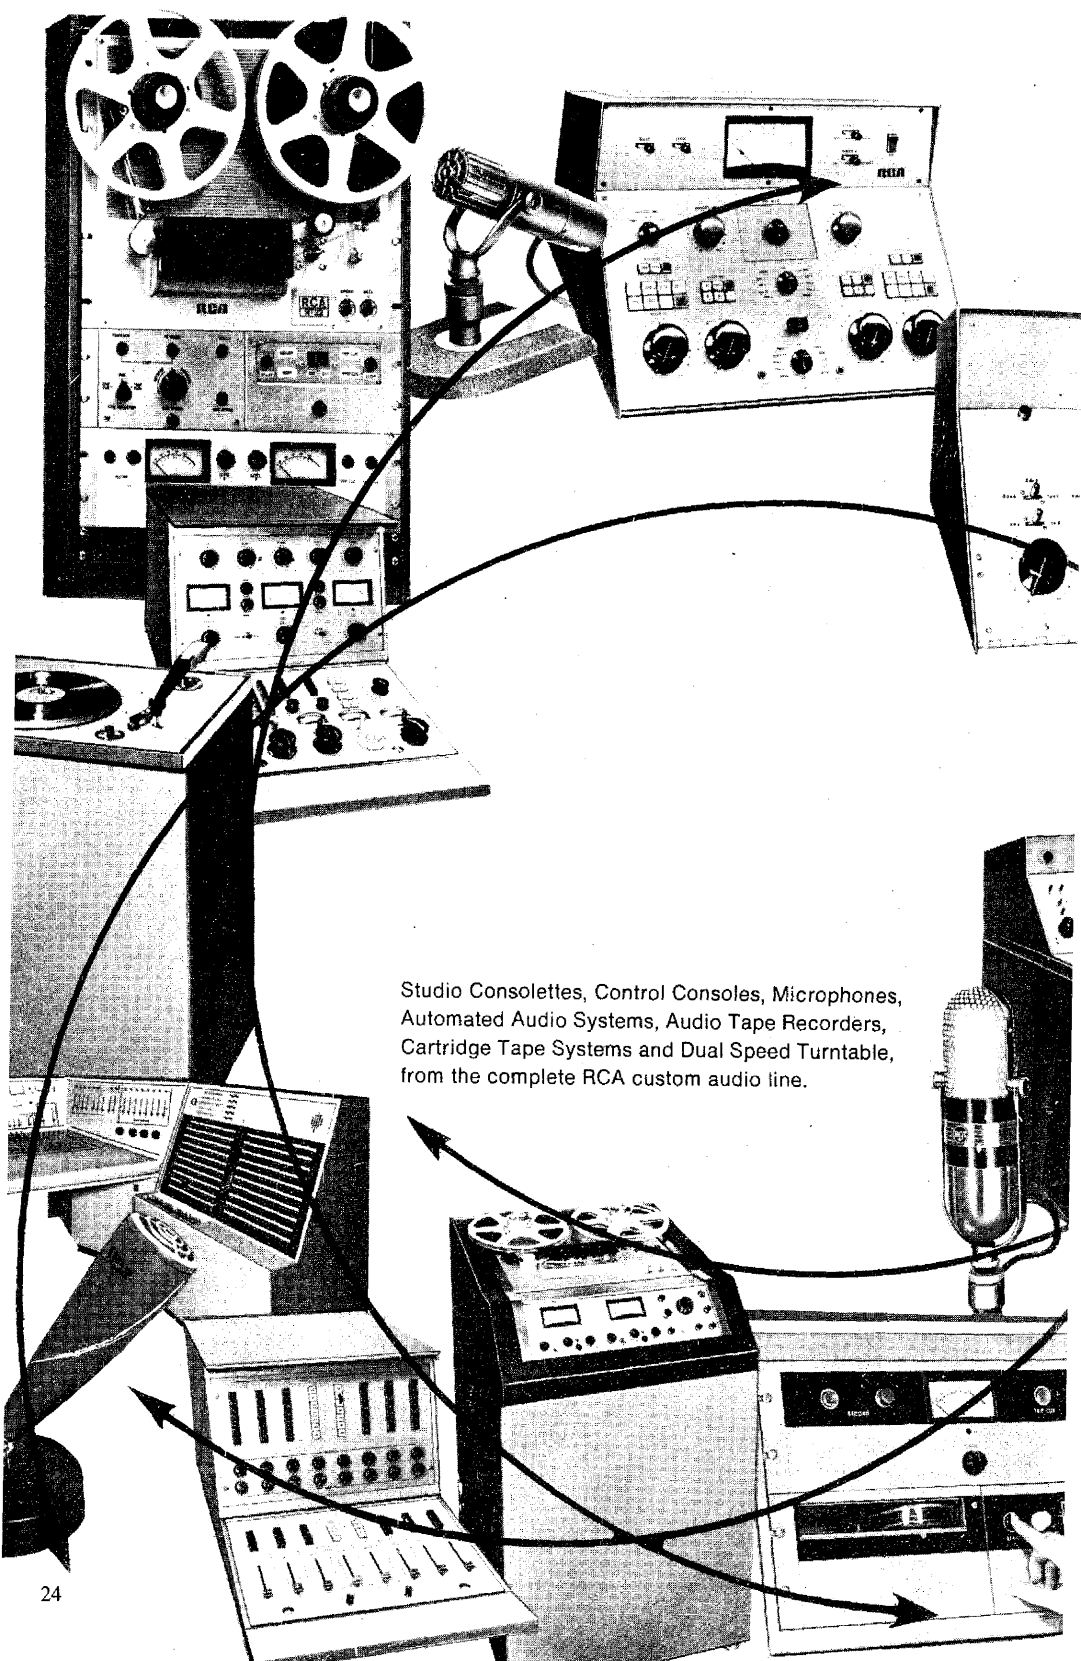

The aims of the Council shall be:

1. To promote cooperation and good-will between European DX-listeners and between European DX-organizations,
2. To achieve common objectives in the field of DX-ing,
3. To stay in close contact with other DX-organizations throughout the world, and
4. To improve contacts between DX-listeners and radio stations."

(Chapter II art. 2)

new era sound processing by Neve

why Neve?

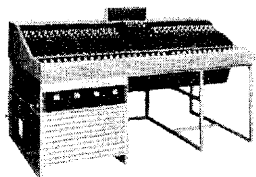

Because Neve sound processing equipment represents an advance, in every way, on all that has gone before. The exacting demands of Rupert Neve and the integrity and skill of his executives and engineers has caused a revolution, creating a new higher standard of performance for the industry. Whether you are in the field of television, sound broadcasting, films or music recording – originating programme material or merely handling it – NEVE offer you the finest sound mixing, switching and distribution equipment CUSTOM BUILT to your special requirements, with an early delivery date.

pourquoi Neve?

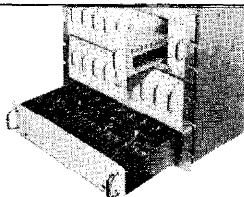

Parce que l'équipement d'enregistrement et de reproduction sonores Neve est plus perfectionné, quel que soit le domaine, que tout ce qui se faisait auparavant. L'intransigeance de Rupert Neve et la conscience professionnelle – et la valeur – de ses chefs de service et techniciens sont à l'origine d'une révolution dans le domaine d'un matériel "son" et de la création d'une nouvelle norme plus élevée dans cette branche de l'industrie. Que vous travailliez pour la télévision, la radiodiffusion, l'enregistrement ou la sonorisation de films – réalisant des programmes ou les exploitant – NEVE vous offre le meilleur équipement de mixage, de commutation et de distribution, construit "sur mesure" dans les meilleurs délais.

warum Neve?

Weil Neve-Ton-Studio-Einrichtungen, verglichen mit allem Bisherigen, in jeder Beziehung einen großen Fortschritt darstellen. Die von Rupert Neve gestellten hohen Anforderungen, verbunden mit der Integrität und dem Können seiner Techniker und seines Verwaltungsstabes, haben zu einer revolutionären Erhöhung des Leistungs-Standards für die Industrie geführt. Ob für Fernsehen, Rundfunk, Film- oder Schallplattenaufnahmen – für die Schaffung oder für die Verwendung von Programm-Material – Neve bietet die besten Ton-Mischpulte, Schalt- und Verteiler-Anlagen, für Ihren speziellen Bedarf "nach Maß" gearbeitet und prompt geliefert.

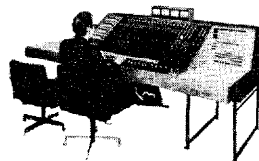

Within this Intertel Mobile colour T.V. control room, is a 24 channel self-contained sound desk incorporating its own line sending and distribution amplifiers, and all facilities normally found in the most advanced control desks.

Neve modular distribution amplifiers are designed to feed a number of lines from the same programme source without interaction. A group of 16 amplifiers for feeding 10 or more lines each is illustrated, together with remote controlled switching units for programme routing. The signal may be routed without degradation of quality.

send for brochure and full technical details.

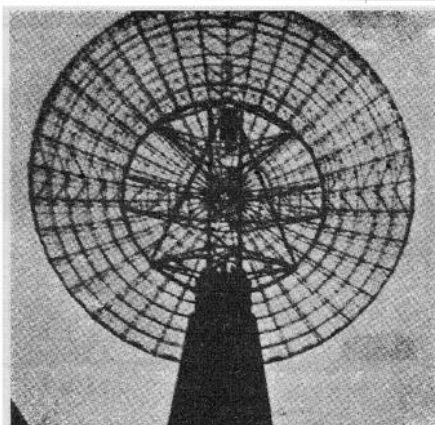

20 channel console built to meet the exacting requirements of Chappell & Company Ltd. Whilst retaining the flexibility of the 'Brick Built' System, a remarkable degree of compactness has been achieved with comprehensive facilities.

SOLAR ACTIVITY IN 1969

by Prof. Dr. M. Waldmeier, Zurich.

In 1966 we had issued a prediction for the forthcoming maximum of sunspot-activity, according to which this maximum was expected for 1968.4 with a highest smoothed sunspot-relative-number of $R_m = 110$. As on the average over all cycles observed hitherto R_m amounts to about 100, the present maximum should be of medium intensity. In the year 1965 the mean relative-number came to 15, in 1966 to 47, in 1967 to 94, and in the first nine months of 1968 to 107. These

values are in close agreement with the prediction, though due to the month-to-month fluctuations the determination of the height and epoch of the maximum will be possible in the course of 1969 only. For the year 1968 the following sunspot-relative-numbers are available up to now:

Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sep.
115	107	92	81	128	114	97	111	121

The so far highest monthly mean was observed in May, i.e. in 1968.5. The maximum however may still slightly shift, as it will be fixed basing on the smoothed sunspot-relative-numbers. But it is evident quite now that the maximum occurred around the middle of the year 1968, and in 1969 sunspot-activity will be on its descending

branch already. The value of R_m will be available in some months only. According to the present state of sunspot-activity — and unless any unforeseen situation will occur — R_m might amount to about 109. Then our prediction would prove to be very appropriate considering that for individual cycles R_m diverges from 50 to 200.

Now as the epoch and intensity of the maximum is known rather definitely, the further course of the current 11-year cycle can be predicted more easily. The decrease of activity will be passing off somewhat more slowly than was the increase. Of the eleven years of the cycle four years fall to the rise and seven years to the descent. The decrease of the smoothed monthly sunspot-relative-numbers should take place fairly regularly, from about 102 at the beginning of the year to about 82 at the end. Thus a mean sunspot-relative-number of 92 results for the year 1969, and this value coincides almost with that for the year 1967 (94). In the year 1969 the critical frequencies and the conditions of short wave communications will therefore be very similar to those in the year 1967.

As in the past, the Swiss Shortwave Service will emit each month the daily sunspot-relative-numbers as well as predictions of the smoothed monthly sunspot-numbers for six months ahead. The emission dates for this information will be as follows:

in the English programme:

Monday,	Jan. 13th.	Feb. 10th.	Mar. 10th.	Apr. 7th.
May 5th.	June 9th.	July 7th.	Aug. 4th.	
Sep. 8th.	Oct. 6th.	Nov. 10th.	Dec. 8th.	

in the Spanish programme:

Saturday,	Jan. 11th.	Feb. 8th.	Mar. 8th.	Apr. 5th.
May 3rd.	June 7th.	July 5th.	Aug. 9th.

THE ROLE OF THE UNITED NATIONS IN SPACE COMMUNICATIONS

The right to know is a basic human right. Also, information flowing freely across international boundaries, from one continent to another, constitutes an important factor towards world understanding.

This understanding can be increased through the utilization of satellite communications by the United Nations and its Specialized Agencies. As early as 1961, the United Nations General Assembly noted "the potential importance of communication satellites for use by the United Nations and its principal organs and Specialized Agencies for both operational and informational requirements". (Res. 1721-D/XVI, 20 Dec. '61).

Since then, the United Nations has devoted much time to the problems of outer space and to the problems of space communications. This work was highlighted by the convening of a United Nations Conference on the Exploration and peaceful Uses of Outer Space in Vienna, August 1968, which examined all aspects of space communications and the role which the United Nations could play in future development and utilization of Outer Space.

Discussions were held on a variety of problems deriving from the creation of two different international satellite systems and the emergence of regional and domestic satellite systems. The conference examined carefully the trends leading towards direct broadcast satellites and the political, economic and social impli-

cations connected with this new communications technology.

The Conference, in which 74 countries participated, felt that space technology should aid the developing countries of the world in such fields as telecommunications, education, meteorology, health, agriculture and in the developing of natural resources.

The Secretary-General of the United Nations, in a paper submitted to the Conference, presented a plan for the utilization of space communications for the maintenance of international peace and security and for the dissemination of information on the work and purposes of the world organization. He felt that the United Nations must take advantage of modern space technology in order to improve the speed and efficiency of United Nations peacekeeping operations, a matter of crucial importance in rapidly developing political situations.

In the field of information, the use of communication satellites could bring the deliberations of the General Assembly, the Security Council and other United Nations organs into the living rooms of millions of people in every corner of the globe, thus contributing to the exchange of political, social and economic ideas, and broadening the areas of understanding by the peoples of the world through the sharing of the same experience at the same time — although continents apart. A United Nations channel on satellite communication systems will permit the people of the world to look over the shoulders of their statesmen during diplomatic conferences and be witness to the making of history.

JOSEF C. NICHOLS,

*Chief International & Satellite Communications Unit,
Radio and Visual Services Division, United Nations.*

THE EUROVISION SATELLITE SCHEME

by Georges Hansen, Director of the Technical Centre of the European Broadcasting Union.

The readers of the World Radio Handbook have been informed, for many years, of the continuous development of Eurovision operations. There is no sign yet of this development being halted or even reduced.

It was this development of Eurovision, together with the successful utilisation of the early telecommunication satellites for television transmissions — in particular the utilisation of the geostatic satellites such as *Syncom 3* and *Early Bird* — which in 1966 led the E.B.U. Technical Centre to think that a system of satellite circuits might one day with advantage replace and surpass the classical network of terrestrial radio relays and cable circuits used for Eurovision.

It must be made quite clear that the principle under consideration was not that of distributing programmes by way of satellite circuits directly to the television broadcasting stations, the radio-relay chains constituting the national television distribution networks would continue to be used. The principle is that of substituting satellite circuits for the international "vision" junctions and the commentary and international "sound" circuits used in Eurovision for routing the programme material from the country of origin to the various countries wishing to integrate it in their own programmes. In the terminology recently introduced by the C.C.I.R., this is an indirect distribution satellite system.

According to the E.B.U. scheme, there would be at first some twenty earth-stations in Europe and North Africa. It was considered desirable to provide for an extension to the whole of Africa and, to that end, the satellite would be equipped with two transmitting aerials:

- one of them having a beamwidth of 7° for serving Europe and North Africa—including Iceland and the Middle East,
- the other having a beamwidth of 12° for serving the whole of Africa.

Figure 1 indicates the areas that would be served, if the satellites were placed over the equator at longitude 15° East of Greenwich. The satellite would be equipped with two transponders, each capable of being connected to either of the transmitting aerials, and capable also of transmitting *simultaneously* either

- two programmes to Europe only,
- one programme to Africa and another programme to Europe, or
- one and the same programme to Africa and Europe.

In order that the Eurovision satellite might fulfil its purpose, the technical quality of the transmissions effected by means of it would have to be equivalent to that obtained using terrestrial "vision" and "sound" circuits. The performance specifications were defined accordingly.

The availability of such a satellite system would present very substantial advantages for Eurovision:

- 1) the possibility of setting up the desired network configuration practically instantaneously, irrespective of the number of participating services. This is of great importance as, more and more frequently, news will have to be transmitted during the event or as soon as possible after the event,

- 2) the geographical extension of Eurovision to Iceland, the Middle East and the whole of Africa. Such extensions would be impossible or, at the best, extremely costly, if effected by conventional methods.

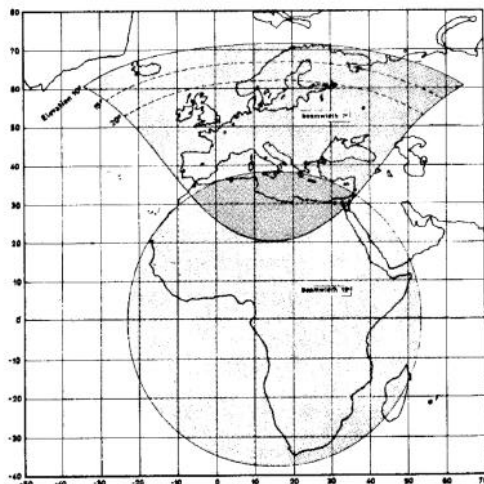

It should be noted that the inclusion of Africa in the scheme is little complicated by differences of local time, relative to Europe. Thus, programmes distributed over a Eurovision satellite network would take place at times that would be just as convenient for Africa as for Europe. Moreover, there would be no "political" problem, as the programmes would not be broadcast direct to the viewers, and every television service participating in the scheme, in Africa as in Europe, could contribute programmes to the network or receive them, provided of course that each had a suitable earth station.

The Experimental Stage: One of the projects under study by the European Research Organisation (ESRO) at the request of the European Conference on Satellite Communications (CETS) is aimed at the Eurovision objective, and it may be said that the projected satellite EURAFRICA developed by the ESRO constitutes virtually a prototype of the operational satellites which the E.B.U. would use in due course. This project is studied in detail in the ESRO report entitled 'Final report on the supplementary study requested by the European Conference on Satellite Communications' which appeared in December, 1967.

The outcome of the Eurafrika experimental satellite project is not known at the time of writing (October 1968); it depends on decisions to be taken by the C.S.E. (European Space Conference—a governmental conference at ministerial level) at its next meeting, in November, 1968, in the matter of the European space policy.

It is, of course, well known that in April, 1968, the United Kingdom Government informed the other governments concerned, that it had decided not to participate in the C.E.T.S. television satellite project, that is to say, the EURAFRICA project. This decision inevitably cast some doubt on the prospect of ultimately putting the project into effect.

The future: A condition for the E.B.U. to carry on with the Eurovision Satellite Scheme, is that the scheme

Coverage zones of the Eurovision satellite.

IS A QUALITY
EXPORTED BY

ELEKTROIMPEX

Budapest 62, P.O. Box 296, Hungary

should be economically sound, that is to say that the costs entailed by the capital-investment charges and the cost of renting the Earth-stations and the Control Centre would have to be less than the cost of leasing the conventional vision and sound circuits. The E.B.U., moreover, has asked that the Earth-stations for the operational system should not cost more than 500,000 US dollars each. The reason for this limit is to enable those Members of the E.B.U. whose financial resources are relatively small nevertheless to take part in the Eurovision satellite scheme.

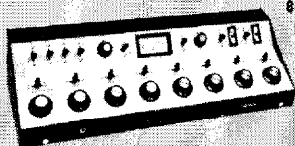

The studies concerning the economic viability of the operational scheme have shown that the optimum configuration is that wherein four satellites are launched during ten years, the first two as soon as possible, each of the others when a satellite in orbit becomes unserviceable. Under these conditions, the system would be economically viable, provided that the launchers used are comparable in cost and reliability with American launchers (cost: 4.5 million US dollars each, probability of success: 0.9), and provided that the satellites cost about 3 million dollars each, and have a probability of about 0.5 of surviving after five years.

It would also be necessary that suitable locations should be found for the Earth-stations; "suitable" in this context implies being reasonably close to a television production centre or a key-point on the national radio-relay network.

The frequencies used by those stations should be in the 4 GHz and 6 GHz bands in order to keep them at sufficiently low cost and below the 500,000 US dollars limit stipulated by the E.B.U.

There are many problems still being studied but what has been said here may already give the reader of the World Radio TV Handbook a good idea of what the Eurovision Satellite Scheme represents.

4 ways to better sound

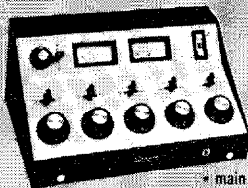

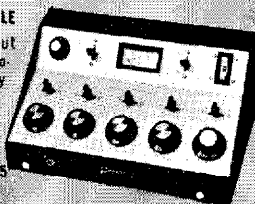

**A-20
8 CHANNEL MASTER
CONTROL CONSOLE**

- Advanced transistorized design
- Self contained power supply - Monitor & cue amplifiers
- Accommodates 22 separate inputs
- only \$1095.

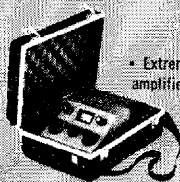

A-15 5 CHANNEL CONSOLE

- Modestly priced, but offers a wide range of features usually found only in larger consoles
- Speaker muting
- Self contained monitor/cue speaker system
- 14 audio inputs
- only \$495

**AS-30 STEREO
5 CHANNEL CONSOLE**

- Ideal for use with stereo automation systems
- production recording studio
- remote broadcast
- main studio control
- only \$725

RA-5 REMOTE MIXER

- Extremely lightweight solid state remote amplifier with 2 channels and 3 inputs
- Operates over 30 hours on 9V transistor batteries
- complete with rugged carrying case
- Price only \$275.

RADIO BROADCAST RECEPTION CONDITIONS EXPECTED DURING 1969

By George Jacobs, Chief,
Frequency Division, Voice of
America, U.S. Information
Agency, Washington, D.C.
20547

By international agreement, broadcasting stations are allocated the following specific bands in the radio spectrum:

LONG WAVE (Low Frequency)		MEDIUM WAVE (Medium Frequency)	
Kilocycles	Meters	Kilocycles	Meters
150-285	1053-2000	525-1605	187-571

SHORT WAVE Tropical Broadcasting Bands		
Kcs.	Megacycle Band	Meter Band
2300-2495	2	120
3200-3400	3	90
4750-5060	4	60

HIGH FREQUENCY BROADCASTING BAND		
Kcs.	Megacycle Band	Meter Band
3900-4000	3.9	75
5950-6200	6	49
7100-7300	7	41
9500-9775	9	31
11700-11975	11	25
15100-15450	15	19
17700-17900	17	16
21450-21750	21	13
25600-26100	25	11

While the majority of the world's broadcasting stations operate within these bands, some operate outside. Most out-of-band operations, however, take place on frequencies adjacent to, or on the edge of the bands allocated for broadcasting.

The Long-Wave band (used in Europe) and the Medium-Wave Band (used worldwide) while allocated mainly for domestic broadcasting, are used also for some international broadcasting to adjacent countries. Although long- and medium-wave stations are normally heard only for moderate distances, long-distance reception is possible over dark transmission paths, mainly during the fall, winter and spring months in the reception area.

The Tropical Broadcasting Bands are assigned for use for domestic broadcasting in tropical areas, where high atmospheric noise levels limit the service area of medium-wave stations. DX reception on these bands is best when the transmission path between the transmitter and receiver is all or mostly in darkness. These bands are used mainly by stations in Latin America, Africa, South and Southeast Asia and Oceania.

The High Frequency Broadcasting Bands, or shortwave bands as they are also called, between 3.9 and 26.1 megacycles (11 and 75 meters) are used for both international and domestic broadcasting. These bands are allocated for worldwide use, except that the 3.9 and 7Mc bands are not allocated for broadcasting in the American area. Also, the 3.90 to 3.95Mc portion of the 75 meter band is used only in Asia and Oceania.

Reception conditions on these bands vary according to the time of day and season of the year. Most of the international broadcasting stations make seasonal changes in frequency usage, mainly on the first Sunday of March, May, September and November. Changes may often be made at other times during the year, due to interference, change of program times, addition of new transmitters, etc. A large percentage of the domestic broadcasting stations operating in the high frequency bands do not make seasonal changes, but some, particularly the stations in India, Pakistan, USSR and South Africa, do make seasonal shifts.

Shortwave, and long-distance medium and long-wave broadcast reception is possible only because of the existence of an electrified region high in the earth's atmosphere. This region, electrified by nature, is called the ionosphere. It is the ionosphere, acting somewhat like a mirror, that reflects radio signals over great distances.

The ionosphere is believed to be caused, at least in part, by ultraviolet radiation given off by the sun. The amount of radiation illuminating the ionosphere varies hourly, seasonally and geographically, depending upon the relationship between the sun and the earth. Reception is usually better on the higher frequency bands (15, 17, 21 and 25Mc) when the sun is more directly overhead or closer to the earth, for example, during the daylight hours, during the winter season, and in tropical or southern regions. Reception in the lower frequency bands (3.9, 6, 7, 9 and 11Mc) is usually better when the sun is lower in the sky, or further from the earth, for example, during the hours of darkness, during the summer season, and in temperate and northern geographical areas.

In addition to hourly, seasonal and geographical changes in reception conditions, there is a year-to-year change over an approximate 11-year cycle.

For reasons not yet fully understood by scientists, this 11-year cycle change appears to result from the difference in the number of sunspots appearing on the face of the sun. When the sun's surface is covered with a great number of spots, the ionosphere is electrically strong and long-distance radio reception is often at its best; when the number of sunspots diminishes, reception becomes poorer. During 1957-61, when the sunspot cycle was at or near its maximum, reception conditions were at their best. During the years 1963-66 there were few sunspots on the face of the sun and reception conditions were considerably poorer.

A new sunspot cycle began during October of 1964 and climbed to a sunspot level greater than 100 by early 1968. Although the experts are not in agreement as to the month or exact value, the present cycle almost certainly reached its maximum sometime during the summer or fall of 1968, with a smooth sunspot number probably in excess of 110. This means that 1968 was a peak year for shortwave radio reception, and that solar activity is now declining.

A sunspot cycle generally declines very slowly the first year or two after it has reached its maximum level. Solar activity during 1969, therefore, is expected to remain at a moderately high level, probably between a count of 90 to 100. This should result in only a slight decrease from the quality of reception noted during 1968.

The following is a general summary of reception conditions expected on each shortwave broadcasting band during 1969:

25Mc band (11 meters)

Excellent reception conditions over long distances is expected during the spring, fall and winter months. Long distance reception should fall off during the summer months, but reception of stations one-thousand or so miles away generally improves during this season. With a moderate level of sunspot activity, a large number of international broadcast stations are planning to schedule transmissions in the 11 meter band during 1969.

21Mc band (13 meters)

Reception of exceptionally strong signals over distances of many thousands of miles, from all areas of the world should be possible during the daylight hours, or when it is daylight at one end of the path, and early evening at the other end. With the high level of sunspot activity predicted for 1969, almost all international broadcast organisations are planning to use this band throughout the year, and a very high level of congestion is expected.

17Mc band (16 meters)

Excellent long-distance reception of stations from all areas of the world should be possible in this band throughout the year from shortly after dawn through the early evening hours. Almost all international broadcast organisations are planning to use this band during 1969, and a very high degree of congestion is expected.

15Mc band (19 meters)

During 1969, propagation conditions in this band are expected to be excellent for the reception of both long-distance stations from medium distances of several hundred, or a thousand miles away. The band is expected to be full of stations with exceptionally strong signals from shortly after sunrise, through the daylight hours and into the evening. During the spring and summer months, excellent reception may also be possible during the night-time hours as well. Exceptionally long-distance reception is more likely to occur for a short period after sunrise, and again during the late afternoon and early evening hours. Medium-distance reception should be best during the late morning and early afternoon hours. With such favorable propagation conditions, and with so many stations planning to use this band, the congestion in the 19 meter band is expected to be greater than in any of the other shortwave broadcast bands.

11Mc band (25 meters)

This is expected to be an excellent band for medium-distance reception during the hours of daylight. During

this period, at any season of the year, exceptionally strong signals should be received from stations that are between approximately 500 and 2000 miles away (900 to 3400km). Long-distance reception from stations several thousand miles away should be possible for a short period after sunrise, and again during the late afternoon and early evening hours. During the summer months, both medium and long-distance reception should also be possible during the hours of darkness. Heavy congestion is expected in this band, especially during the late afternoon and early evening hours.

9Mc band (31 meters)

This band is expected to be excellent for daytime reception over short-to-medium distances of the order of 400 to 1500 miles (700 to 2500km). Fairly good long-distance reception, over many thousands of miles, should be possible throughout the year during the early evening hours, through the hours of darkness and until shortly after sunrise. Almost every shortwave broadcast organisation is expected to use this band during 1969, and a high level of congestion is very likely to occur, especially during the early evening hours.

7 and 6Mc band (41 and 49 meters)

Excellent short-range reception is expected on these bands during the daylight and early evening hours, for distances up to approximately 1000 miles (1650km). During the fall, winter and early spring months, when static levels are low, fairly good medium and long-distance reception should be possible from shortly after sunset, through the hours of darkness and until shortly after sunrise. High static levels are expected to make long-distance reception somewhat difficult during the late spring and summer months. Fairly heavy congestion is expected in these bands, especially during the late afternoon and evening hours.

4, 3 and 2Mc bands (60, 90 and 120 meters)

These bands are used mainly for short-distance reception. During the hours of daylight, stations within a radius of a few hundred miles should be heard well. After sunset, and throughout the hours of darkness, the reception range should increase to at least several hundred miles, and for the more powerful stations, to a thousand miles or more. During the summer months, high static levels are likely to make reception in these bands difficult at times.

For more specific reception information, please refer to the Table of the Most Suitable Meter Bands for 1969 (see page 52).

DX ALLIANSEN, Box 3108, S-103 62 Stockholm 3, Sweden

DX-Alliansen is an organization founded twelve years ago by the Swedish DX-Clubs, governed and controlled by them. There have always been many DX-Clubs in Sweden and, of course, they have much in common. The purpose of DX-Alliansen is to serve the clubs in respect of all common interests and problems, to represent them in Sweden and internationally. The interest for DX-Alliansen among the clubs has, on the whole, always been on a high level. One of the main reasons for this is probably the yearly DX-PARLIAMENT, a gathering in which clubs and DX-ers, together with representatives of radio stations and radio organizations in Europe are taking part. You are heartily welcome to take part in the 1969 DX-PARLIAMENT. Please write us, if you are interested.

DX-ALLIANSEN publishes monthly a bulletin, "Allians Nytt". An English edition is published several times a year, and is distributed by Radio Sweden's DX-bulletin. DX-Alliansen also offers a special, very nice, DX-badge for different numbers of verified countries.

DX-ALLIANSEN appreciates correspondence with foreign DX-Clubs, to exchange views and to discuss common problems. We are proud to say that we are taking an active part in the EUROPEAN DX COUNCIL.

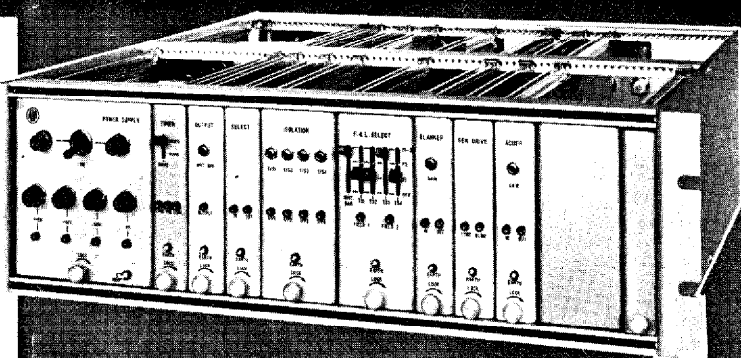

Australia's largest manufacturer of Broadcast and Television Equipment

VERTICAL INTERVAL TEST SIGNAL EQUIPMENT

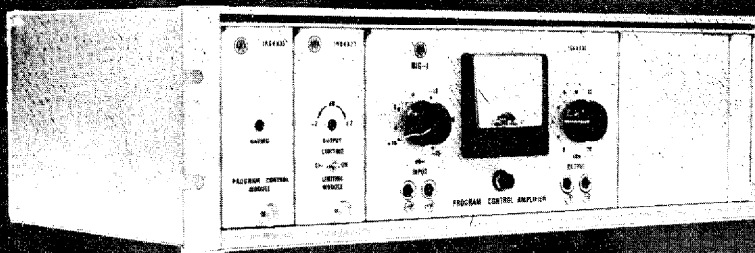

TIK-12 SERIES

The TIK-12 series equipment is intended for use in conjunction with normal television test signal wave-form generators and uses the additive insertion technique.

PROGRAMME CONTROL AMPLIFIER 'BIG-1

The latest item of broadcast - studio equipment for automatic control of programme level and peak limiting in high-quality audio systems, broadcasting and television.

AWA manufactures a comprehensive range of transistorised studio equipment for sound and vision broadcasting and, as a major supplier of broadcasting and television equipment in Australia, the Company can offer a wide variety of transmitters and transmitting ancillaries.

40 YEARS HAPPY STATION

The longest running short wave show in the world.

The year 1968 marks the 40th year of international, short wave activities through the medium of the "Happy Station" worldwide programmes from Hilversum, Holland. — Perhaps it would be interesting to make a little flashback on this short wave pioneer programme by telling how it all started and how it was carried on.

I will have to take a deep breath to tell my story in a nutshell for it began a long long time ago, as a matter of fact in 1928.

Actually it had already started in 1927 when the Philips Light and Radio Company at Eindhoven, Holland, built the first experimental long distance short wave transmitter with call letters PCJ in an effort to reach the then Netherlands East Indies with a view of establishing spoken Radio contact with countries at the other side of the globe. The experiments by the Philips engineers were so successful that already in March 1927 Queen Wilhemina of the Netherlands spoke for the first time in history to her subjects overseas. Shortly thereafter the still kind of makeshift transmitter was removed from the Eindhoven Laboratories and factory area to an open spot on the heath at the outskirts of the city of Hilversum—20 miles from Amsterdam—with a view of further experiments to build a much larger and stronger station in the future. That was in 1928.

It was here at Hilversum that my Radio career started, although at that time I never dreamed it would become such a part of my life. The entire set-up then was of an extremely modest nature. In a small, then vacant private house, a studio and amplifier room were established, and a wired connection of some 200 yards was made with the transmitter then housed in a wooden shack with near it a little concrete pool of water to serve the cooling of the transmitter valves, also called tubes. For this was the beginning of the time of factory-made water cooled transmitting valves, which had to be tested in actual practice, and reported upon. Especially the high vacuum rectifier tubes for a while were a constant headache and an expensive one too. The transmitter itself with a power of no more than 10kW still was a very experimental affair with loose wires and connections, control meters, power switches, condensers and transformers, water hoses, fuses, insulators, and what not. One had to be careful not to trip over all that paraphernalia, and not to touch any of the high frequency outlets and last not least at night not fall into the waterfilled cooling pool outside! High tension everywhere. But it was fun and thrilling to be there in that pioneering time, when everything was still hand-operated by no more than two expert technicians and a controlling engineer giving me a good working knowledge of this new high frequency business. And oh yes, the transmitting antenna! Believe it or not, it consisted of but a 150 yard wire run diagonally from our shack to a nearby Radio mast of the local medium wave station. Very primitive indeed, but it did the trick!

The signals went round the world and we were not interfered by any station simply because we were still the first and only ones to operate on a wavelength of 31.28 metres. Those were the days, . . . 40 years ago. Unforgettable days.

Also my studio set-up was a very primitive one. A Reiss carbon microphone within a white marble block and a metronome acting as time and intermission signal. On a sturdy table a big oldfashioned His Master's Voice phonograph or gramophone, that had to be cranked up every 5 minutes and kept at the right speed of 78 RPM., and this with a pick-up as heavy as half a brick, fed by steel needles that had constantly to be changed. Along the wall there were piles of twelve inch gramophone records with operas, operettas, overtures, and the lighter stuff like dance music by Jack Hylton, Paul Whiteman, and the other boys of Big Band fame of that time. It was a great time. "Happy

days are here again!" we played to all corners of the earth . . . and I said: "Ladies and Gentlemen . . . this is the Happy Station of Hilversum, Holland . . . Is everybody happy? Please let us have your reports on reception, intensity of sound, quality of modulation, and how you like the programme." Reports, letters and cards came from all over the world. Friendly and enthusiastic letters, many from far-flung outposts and remote and isolated spots, from technical listeners building their own receivers on a self-made circuit, from explorers, scientists and missionaries, as well as from radio operators on board ship somewhere on the Seven Seas.

This new long distance communication and the thrill it brought to many thousands, acted as a wonderful inspiration to me. It became a fascinating game, a most interesting and versatile work, whilst the listeners snapped up the idea of the "Happy Station" with its music and carefree chit-chat as a sort of tonic. It spread like wildfire and the reciprocal happiness of spirit grew with leaps and bounds in many countries where short waves were the only means of long distance communication. But there was one handicap. A big BUT! Ours being an experimental transmitter run by an **industry**, we had but an experimental licence and as such were bound to certain regulations for operators outside official broadcasting. All announcements had to be on the technical side only. No news casts, no political or non-political commentaries, no religious features, no communication of any sort, excepting what strictly belonged to the testing and experimenting vocabulary . . . or the licence would be taken in. This rule was very rigidly applied by the authorities.

All of a sudden I realised I had a responsibility and that I had to abide by the law. Did it curtail my enthusiasm about the new medium? Certainly not. I simply had to find aside the technical talk, which in the long run could also become boring, something that could not be strictly termed: communicative! I had to create a format of my own. So, I invented a certain chit-chat in between the musical offerings. About the music, the artists, the compositions, the weather conditions, the surrounding nature, the flowers and the plants, the traffic outside, the small happenings in the studio and on the transmitter, something on educational matters now and then, and so on . . . and mould it all into an optimistic and happy atmosphere, throwing in some poetry for good measure, and finally answer the incoming correspondence from the listeners, which in itself offered a wide variety of talk that could not be termed as editorial news or official commentary. Except for some occasional raps on my knuckles, I got away with my system, thereby keeping listeners in a happy mood while building bigger and better musical programmes to suit the international audience. Good and well planned musical entertainment is the best communication for all Radio listeners. It is a language that is universally understood.

Naturally a good and clear voice is needed on the short waves especially, to cope with the typical representation of fading, interference, distortion, as well as natural or man-made static referred to in the short wave code as QRM and QRN.

I never knew before entering this new field, that I had what is generally called a clear "Radio voice". But I discovered that I just happened to have one, which was a lucky circumstance and a reason to be grateful for until this very day.

Since the broadcasts, aside from the technical angle, were principally meant for listeners beyond our borders, the most universally spoken languages had to be English and Spanish and some Portuguese for Portugal and Brazil. In between of course I also used Dutch for those nationals who lived abroad as well as for the members of the Netherlands Merchant Marine. Furthermore there had to be also announcements in German and French, as well as in a number of other foreign tongues for which I had to acquire a certain smattering knowledge to identify

THIS
MICROPHONE
SUPPRESSES "POP"
...EVEN IN THE
TIGHT
CLOSE-UP
"DANGER
ZONE"

The Shure SM58 self-windscreened unidirectional microphone is ideal for broadcast uses as remote news, sports, interview and vocal recordings because it eliminates or minimizes the irritating "pop" caused by explosive breath sounds. It's great for studio announcing, too—or wherever the announcer or vocalist "hugs" the microphone. Of course, the same filters that eliminate pop also do away with the necessity for an add-on windscreen for outdoor uses.

On the other hand, the unusually effective unidirectional cardioid pickup pattern (uniform at *all* frequencies, in *all* planes) means that it is a real problem-solver where back-

ground noise is high or where the microphone must be operated at some distance from the performer. Incidentally, but very important, the SM58 tends to control the low frequency "boominess" that is usually accented by close-up microphones.

Other features: the complete pop-proof filter assembly is instantly replaceable in the field, without tools. Filters can be easily cleaned, too. Stand or hand operation. Detachable cable. Rubber-mounted cartridge minimizes handling noise.

Special TV tested non-glare finish. Multi-impedance, small size for maximum handability.

SHURE SM58

SELF-WINDSCREENED UNIDIRECTIONAL DYNAMIC MICROPHONE

(continued from page 35)

ourselves and stimulate cooperation among the very large and diversified listener potential.

It goes without saying that for this highly international and versatile work on a worldwide geographical scale, one has to have considerable linguistic ability to hold the attention of listeners many thousands of miles away, in addition to possessing not only a sense of humour, but also a feeling for the right psychological approach. A friendly approach. Travel abroad, work and experience in North as well as in South America, sometimes under very trying and difficult circumstances, had put me to a certain extent through what Americans call "the mill of life", learning things the hard way. Just being linguistic and possessing a bit of the "gift of the gab" is not sufficient. Long distance Radio offers a powerful means of expression and influence, and success lies not so much in the fact of how many languages one speaks, but the manner in which one uses the language and the thought one wants to convey.

From the very beginning of short wave Radio communication, I felt that this was not only a matter of bridging distances, but offering a tremendous opportunity for the birth of an ideal. To instill, spread and promote universal understanding in the world. To bring a message of goodwill and cheer no matter what creed or nationality. By accentuating the positive things of life and to do this in a smiling and cheerful manner. In other words to create a universal atmosphere of tolerance and goodfellowship for the benefit of all concerned. To consider the peoples in the world as one great family of which we all want to be a member. We now had the technical means to reach the world through a new and powerful medium. This medium should be used in a simple and logical way to promote Peace through a feeling of happiness. Our international call letters in those early days were PCJ—which for many years I interpreted as: *Peace, Cheer, and Joy*. This ideal, enhanced by spirited and beautiful music formed and still forms the base and the platform on which the now 40 years old "Happy Station" is built.

Before the Second World War when still with Philips, I travelled wide and far to personally meet and speak to a great many of our listeners. In Spain and Portugal, in America, India and Indonesia, and other countries. To learn from actual experience and personal contact about the characteristics, customs, likes and dislikes of the audience thereby constantly keeping tuned to the pulse

of the world. "Keep in touch with the Dutch" I said, and we shall try to make it worth your while!

The outbreak of the Second World War put a rude stop to our endeavours to carry on with our peaceful message. Actual operations had come to a sudden standstill. I went out of broadcasting and for 5 years became a clandestine listener, hoping for the final score, while planning how to resume one day our interrupted activities.

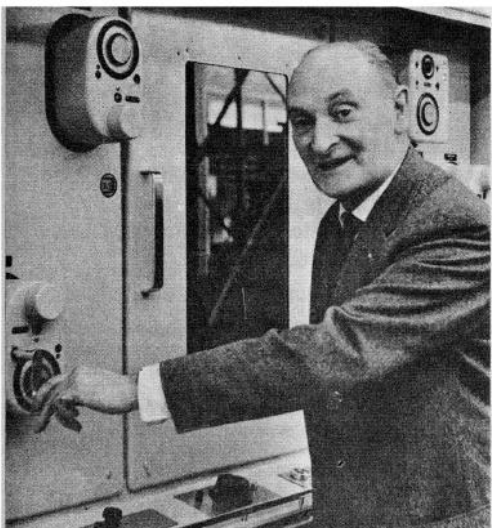

When finally the nightmare was over, a new and much greater, now national Organisation was formed: Radio Nederland Overseas Service, the official but independent mouth-piece of the Netherlands, now consisting of a large staff with many separate departments for the Dutch, as well as international services, with new and more powerful transmitters and studio equipment, including in 1969 a modern $2 \times 300\text{kW}$ network built by Dutch engineers on the island of Bonaire in the Netherlands Antilles. This with a view of covering the South, Central and North America. A similar Relay station is also planned for the future to serve the Southern and Eastern hemisphere.

Returning to the flashback. In 1945 I was asked to join the new organisation of Radio Nederland with a view of continuing my interrupted pioneer programme under the familiar name of the "Happy Station". Through consistent and diligent work by my relatively small staff and the wonderful loyalty of our far spread audience, the Phoenix of friendship and goodwill rose once more from the ashes! In 1953 I was honoured by Queen Juliana by a Knighthood in the Royal Order of Orange Nassau for my contribution in spreading Peace and goodfellowship in the world for and from the Netherlands.

Again I travelled to many countries and even once around the world by K.L.M., our own national airline. Many new contacts were made adding to the ever increasing audience of enthusiastic short wave listeners, proving once and for all that the message of good will and international friendship is not a phrase but a fact and a tremendous reward for 40 years of dedicated toil on the etherlanes of high frequency Radio communication.

To the Editors of "World Radio TV Handbook" whose initiative I have from the beginning ardently supported as an excellent and much needed source of reliable information for listeners and viewers around the world, — my sincerest wishes for continued success.

Best 73's.
Edward Startz.

DUTCH WORLD BROADCASTING SYSTEM

TO OPERATE

NEW RELAY STATION

ON THE ISLAND OF BONAIRE

Few DXers would deny that overcrowding of the short-wave bands has assumed very serious proportions during the past ten years. More and more stations are claiming a share of the already inadequate range of frequencies allocated for broadcasting purposes, and at the same time the battle for the survival of the fittest is being waged on a basis of transmitter power.

Radio Nederland's transmitter station is situated at Lopik, about 20 miles southwest of Hilversum, and consists at present of three 100kW, one 50kW and one 10 kW transmitters. For many years these have afforded satisfactory reception of programmes in several languages, the response to which is revealed in the tens of thousands of letters which the station receives annually. But it has also become clear from these letters that the quality of reception has been falling during the past decade. Our Propagation Department was confronted with the unpleasant fact that previously satisfactory wavelengths had become unusable owing to the arrival of new or more highly powered stations. We were constantly obliged to seek new frequencies to avoid interference from other stations and looked avidly for possibilities to give a better service to our listeners.

1964 saw the completion of the Trans World Radio transmitting station on the island of Bonaire in the Netherlands Antilles. Its extremely favourable position from the point of view of reception in North and South America led to an offer being made by Radio Nederland to buy air time on both the medium and short wave transmitters, an offer which was quickly accepted. The years during which this arrangement has operated have shown conclusively that, in many areas, signals from Bonaire are received much more clearly than signals from Lopik. Radio Nederland accordingly decided to build a relay station of its own on the island, from which programmes will be broadcast when the contract with Trans World Radio expires.

Bonaire has an area of about 106 square miles. With five other islands it forms the Netherlands Antilles, an autonomous part of the Kingdom of the Netherlands. A significant proportion of the operating personnel of the new station will be drawn from the local population, and thus the siting of the station on Bonaire is an important contribution to the island's economic development. North Bonaire, as the new station is called, is easy to find: the visitor has only to follow the coast road running north-west from Kralendijk. Its position is revealed well in advance by the towering aerial masts. The station has two 300kW transmitters, built by the Philips concern at their factory in Huizen.

A transmitter of the type used consists mainly of a large cabinet containing amplifiers for the H.F. section, in which the weak signal from the oscillator (which determines the frequency of the outgoing signal) are amplified to the power required for the carrier wave; and for the L.F. or modulation section, in which the programme signal is amplified to the power required to superimpose it on the carrier wave and feed both to the aerials for onward transmission. In addition to the cabinet, there is a considerable amount of apparatus for the provision of energy, both A.C. and D.C., at various voltages, and for dissipating the heat generated in the transmitter during operation.

The power distribution equipment is housed in a special room. Occupying 4,300 cubic feet of the building, this is

cramped with transformers, rectifiers, condensers and chokes. The cooling plant, ventilators, heat exchangers and measuring and control equipment also demand a substantial amount of space. These are housed in a separate building with a floor area of nearly 5,000 square feet.

The provision of electricity for the new station was in itself a problem. At full modulation, each of the transmitters consumes nearly 900kW, much of it at 10,000 volts. Adding the power consumed by the lighting and air-conditioning plants, coolant circulation pumps, etc. brings the total to something like 2,000kW. To meet this demand the station is provided with a generating plant, consisting of six diesel-driven sets, each with a rated output of 500kW; this is well in excess of actual requirements and will permit a highly desirable degree of flexibility in operation, while at the same time leaving at least one generator available as a stand-by during overhauls or in emergency.

The choice of cooling systems for the transmitters and the engines powering the generators was perhaps as complex a problem as providing them with energy. Local factors played an important role in the final choice. The station is quite close to the coast, and thus water cooling was found more satisfactory than air cooling, the more so in view of the high ambient temperature. The cooling systems of the transmitters and diesel engines are of the enclosed type and employ fresh water. This is circulated by means of pumps and passes through heat exchangers, the jackets of which are fed with sea water by a number of high-capacity submersible pumps situated several feet beneath the surface. After use, this water is returned to the sea.

The third main component of the station is the aerial system. Altogether, twenty-one aerials are used to beam signals in various directions on various frequencies. The majority are certain arrays embodying reflectors — some active, others passive — which serve to limit radiation to one side of the array. A number of the aerials are of the twin-band type — i.e., they are suitable for two adjacent frequency bands. Switchgear mounted beneath some of the aerials enables the direction of radiation to be reversed or the angle varied within certain limits.

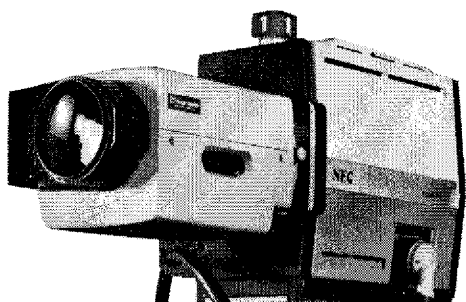

In addition to the curtain arrays there are a number of single dipoles for medium-range transmissions, and, finally, an omnidirectional quadrant aerial serving the local area. Seventeen steel pylons, varying in height from 82 to 330 feet, are required to support the aerials. These pylons are of open lattice construction and resemble scaled-down versions of the Eiffel Tower; the stresses set up by the weight of the aerials and by winds are absorbed by anchors let into the rocky bed on which the masts are erected. The aerial feeders and associated switchgear are mounted on steel masts, the foundations for which were made by drilling holes in the rocks.

A large number of switches are needed to enable each transmitter to be connected to the aerial desired for a particular transmission. For their purpose (the 300kW modulated H.F. line) these switches are very sizeable. They are housed in a special building in aluminium cabinets measuring $3\frac{1}{2} \times 3\frac{1}{2} \times 51$ inches, and are remotely controlled from the transmitter hall.

It is obvious that in an installation such as this, where very high voltages are employed, extensive safety measures are required to protect operators and equipment. At

A combined subscription to Parts A and B (12 numbers) may be ordered either from Brussels or Geneva (price 420 Belgian francs or 36 Swiss francs).

Bonaire North, an electronic "watchdog" system automatically breaks the high-voltage circuit, or switches off the entire equipment, if a fault develops or if an operating error is made. The importance accorded to safety is such that the apparatus concerned is more complex than the equipment which it protects; it is thus obviously costly, but in addition to protecting human lives and equipment it enables faults to be rapidly diagnosed and rectified.

A few miles from the transmitting station is the Relay Centre, in which the programmes to be transmitted are compiled from material supplied from Hilversum. Items other than news and current affairs are pre-recorded and flown to Bonaire by K.L.M. Royal Dutch Airlines.

The electronic equipment as used in the new Bonaire transmitters for automatic tuning, interlocking circuits and fault tracing.

News and other items subject to change at a moment's notice are transmitted over a radio link shortly before the programme is due to go on the air from Bonaire; a comprehensive receiver installation with a matched aerial is used for this purpose and recording and editing machines enable these items to be rapidly prepared for transmission.

In the future, these "feeder programmes" will be transmitted by radio telephony in the "fixed" bands. A telephony transmitter with single sideband modulation has been hired from the Dutch Postal and Telegraph authorities for this purpose. From the technical point of view, the feeder link is the weakest in the chain, but the experience of recent years gives every hope of satisfaction in the future. So much for the plan and the means by which it will be realized. But you will be most interested in knowing when and on which frequencies you can tune in to North Bonaire. At the time when this article was written (September, 1968), the final phase of construction had commenced. Barring unforeseen events, test transmissions are expected to begin early in January, 1969. These will go on the air from 2330 to 0130 GMT in the 6MHz band (the frequency will probably be 6085kHz). The programmes will be identical to those transmitted on 800kHz at the same hour. Reception reports covering the first test transmission from North Bonaire will be rewarded with a special QSL-card. After a test period of four months, the new programme schedule will commence on May 4th, 1969.

We take this opportunity to remind experienced DXers that any assistance which they can render in our efforts to establish the most suitable frequency bands for these new transmissions will be most welcome. As stated in the WRTH Summer Supplement, 1968, we shall be pleased to supply the requisite information to any DXer willing to assist us in this way.

RECORDED MUSIC LIBRARIES

Most Recorded Music Libraries operating in England supply Recorded Music, often specially commissioned, generally of varied character (although some may specialise) and designed especially to meet the needs of programme producers in the fields of television, film and radio. Recordings are usually available on disc (either specially-produced 78 r.p.m. for facility of groove location, or microgroove) although in tape versions at 7½ and 15 i.p.s. full track are often available by arrangement and some two-track stereo may be offered. Conditions of usage vary in different territories but it should be pointed out that both the musical works and the recordings thereof are the copyright property of the owner-publisher and the public performance by any means is subject to the requirements of the Performing Right Society, 33 Berners Street, London W.1 (or their representatives in the territory concerned).

Moreover, the grant or purchase of recordings does not automatically grant any permission to copy or re-record the material on to film sound-track or any other sound-reproducing medium. Such copying is normally permitted, however, subject to licence issued in England by the copyright owner direct or on his behalf by a representative organisation (the Mechanical Copyright Protection Society, Elgar House, 380 Streatham High Road, London S.W.16) specializing in the collection of mechanical fees and the issue of relative licences. Producers are advised in their own interests to ascertain licensing details in advance to avoid any possibility of infringement. It should be checked also that the items concerned are available for world-wide distribution should such a need exist.

Prices and conditions of usage will gladly be supplied by the publisher concerned from whom also a classified catalogue can be obtained.

Special Abbreviations for Shortwave Listeners:
 Q-Codes: The following "Q" Codes, devised at the Cairo Convention of 1938, are used among shortwave enthusiasts listening to broadcasting stations (so-called DXers): QRG = Frequency; QRK = Readability; QRM = Interference (from other transmitters); QRN = Atmospheric interference (static); QRT = Close down; QSA = Signal strength; QSB = Fading; QSL = Verification (of reception); QTH = Location.
The following abbreviations are generally used in club publications:
 BC = broadcast; BCB = Broadcast band, i.e. medium wave band; CW = Continuous Wave, i.e. morse code; HF = High Frequency; ID = Station Identification; IRC = International Reply Coupon; LA = Latin America; mx = music; nx = news; OM = Old Man, a general term of greeting; rx = Receiver; SSB = Single Side Band; SWL = Shortwave Listeners; Tnx = Thanks; tr = Transmitters; 73's = Best Wishes.

We need your help
 especially if you are an expert on Latin America and/or other continents.
 The WRTH constantly invites assistance from experienced DX-ers in order to procure supplementary information for use in the 1969 Summer Edition of the WRTH.
 If you believe that you may be able to render us any assistance in this respect, please write for further details.

the windiest
corner
of the windy
city

...this
microphone
needs no
external
windscreen

Shure's remarkable new SM50 omnidirectional dynamic microphone is SELF-WINDSCREENED! It is strikingly immune to wind noises and explosive breath sounds—making it ideal as a dependable "workhorse" microphone for remote interviews, news, sports pick-ups and a variety of field and studio applications. The five-element built-in windscreen makes it virtually pop-proof in close talking situations. And unlike other "built-in" windscreens, this one is "unitized" and self-contained with no bits or pieces to assemble after cleaning. In fact, you can actually rinse dirt, saliva, lipstick and other screen clogging foreign matter out of the windscreen assembly under running water as often as needed—or replace the "unitized" assembly if necessary in a matter of seconds.

Additionally, the SM50 is the cleanest sounding professional microphone at anywhere near its price class. It delivers highly intelligible, natural and pleasing speech and vocal music that is especially full-bodied and rich in the critical mid-range.

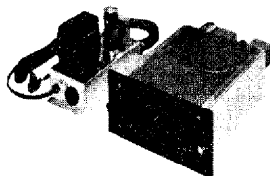

It is extremely rugged and will require little or no down time as the years go by. Too, when comparing it to other moderately priced omnidirectionals, it is lighter in weight, supremely well-balanced for "handability," has a detachable cable, and a rubber mounted cartridge for minimizing handling noises. The SM50 is worthy of your most serious consideration. For additional information, write to Shure Brothers, Inc., International Sales, 222 Hartrey Avenue, Evanston, Illinois 60204, U. S. A.

Shure stereo equalizer and preamplifiers are praised as MAJOR contributions to upgrading station quality by broadcasters.

SE-1 Stereo Transcription Preamplifier

Provides precise RIAA equalization from magnetic phono reproducers at line levels. Separate high and low frequency response trimmers. Lowest distortion, noise level, susceptibility to stray RF fields.

M66 Broadcast Stereo Equalizer

Passive equalizer compensates recorded frequency to three playback characteristics: RIAA, flat, roll-off. Provides precise equalization from magnetic pickup at microphone input level.

This is the Philips Plumbicon* Colour Television Camera

- It is the finest camera of its kind. It is being acknowledged and acclaimed throughout the world of television as the most efficient colour camera now available. Used by the world's most important broadcasting organisations, it leads its field.
- This camera is but one of many outstanding Philips achievements. The skill, knowledge, ingenuity and ability, gathered throughout more than 75 years, have made possible the wide range of Philips products and systems for radio and television broadcasting.
- Philips equipment covers the complete range from microphone to broadcast transmitter, from television camera to aerial, from line amplifier to radio link.

*) Registered Trade Mark for television camera tubes.

The band selections have been made on the basis of both propagation conditions and operating schedules.

A dash in the band column indicates reception is not expected due to difficult propagation conditions or stations not normally operating in propagationally suitable bands.

STANDARD FREQUENCY & TIME SIGNAL STATIONS

The ordinary sw-listener soon notices a specialized technical progr. of tones and time pulses usually received on carrier freq's of 2.5, 5, 10 or 15 MHz and sometimes on 20 and 25 MHz, if he listens in that part of the spectrum. These signals have many uses in science and technology. They are most useful to the non-specialist in obtaining accurate time, in checking the calibration of his radio receiver, and in gaining information on radio propagation conditions. The forecasts of the present and future state of the ionosphere can be quite useful in determining the possibilities of sw-reception. The forecasts are given by WWV and JYJ for certain parts of the globe.

R. STATION WWV, WWVH, WWVB and WWVL (Gov.)

St. WWV, Box 83-E, Route 2, Fort Collins, Colorado 80521, USA; St. WWVH, Box 578, Puanene, Maui, Hawaii; WWVB/WWVL, Box 83-E, Route 2, Ft. Collins, Colo., USA—L.P.: Chief Freq. and Time Broadcast. Sec's: Peter P. Vezibic, National Bureau of Standards, Boulder, Colo. 80502. Eng. in Charge: R. F. Carle (WWV, WWVB & WWVL); Eng. in Charge: S. Katanara (WWVH).

Standard Radio Frequencies:

WWV 2500kHz 2.5kW, 5000kHz 10kW, 10000kHz 10kW, 15000kHz 10kW, 20000kHz 2.5kW, 25000kHz 2.5kW. The broadcasts are continuous, night and day exc. from 45 min 15 sec. to 49 min 15 sec. past each h—WWVH 2500kHz 1kW, 5000kHz 2kW, 10000kHz 2kW, 15000kHz 2kW. Continuous exc. from 16 min to 19.59 min after each h—WWVB 60kHz 13kW. Continuous. WWVL 20kHz 1.8kW. Continuous, except for exp. changes.

Program:

WWV transmits radio propagation forecasts in International Morse Code every 5 min's just preceding the voice ann's; the IUWDS "Geolert" is broadcast in International Morse Code each h from WWV during the first half of the 19th min and from WWVH during the first half of the 49th min. Greenwich Mean Time is ann. from st's in Intern. Morse Code each 5 min. At WWV a voice ann. of Greenwich Mean Time is given each 5 min. as follows: "National Bureau of Standards, WWV, Fort Collins, Colo. Next tone begins at ... hours, ... minutes Greenwich Mean Time." At WWVH a voice ann. of Greenwich Mean Time is given each 5 min. as follows: "National Bureau of Standards, WWVH, Maui, Hawaii. Next tone begins at ... hours ... minutes Greenwich Mean Time." WWVB transmits a special time code consisting of 10db carrier reductions each second for 0.2, 0.5 or 0.8 sec. (Format on request.) Transmitted phase will be advanced 45° for 5 min. each h between 10 min. and 15 min. after the hour. No special identification will be given. WWVL is still experimental and operates on 20kHz; also 19.0, 20.5 and 20.9kHz. WWVL current format: 20kHz from min. to min. + 10 sec; 19.9kHz from min. + 10 sec to min. + 20 sec, then again. No other identification or codes used.—V. by QSL-card or letter. Pub: Progr. on request. In addition to the 20kHz carrier other exp. freq's near 20kHz may be transmitted alternately or simultaneously.

STATION LOL

Addr: Observatorio Naval, Avenida Costanera Sur 2099, Buenos Aires, Argentina.

Standard Freq. and Signals: 5000kHz 2kW, 10000kHz 2kW, 15000kHz 2kW. From 00.00 1st Sun in Oct. to 00.00 1st Sun in April: 11.00–12.00, 14.00–15.00, 17.00–18.00, 20.00–21.00, 23.00–24.00. From 00.00 1st Sun in April to 00.00 1st Sun in Oct.: 12.00–13.00, 15.00–16.00, 18.00–19.00, 21.00–22.00, 00.00–01.00.—Schedule: 3 min dash (1000 or 440cs alternately) beginning at 00.00, 00.05, 00.10 etc. Then 3XLOL in Morse followed by "Observatorio Naval Argentina" followed by hrs & min's preceding dash tone. T.S. transmission at min. 55–59 in each h—V. by QSL-card or letter. Re. wanted.

STATION VNG—AUSTRALIAN POST OFFICE

Addr: Station VNG, c/o Assistant Dir. Gen. Radio Section, Postmaster General's Dept, 57 Bourke St, Melbourne 3000, Australia. Cable: "Gentel". L.P.: Divisional Eng. R. Trainor.

Stations: Lyndhurst: 4500kHz 1kW 09.45–20.45; 7500kHz: 09.45–20.45(10kW), 21.00–09.30(1kW)—12000kHz 10kW: 21.00–09.30—The st. has bursts of 1000cs tone 100 milliseconds long exc. the 59th second of each min. Immediately following the seconds pulse marking the hour a recording is played: "This is an Australian Post Office time signal tr. from VNG Lyndhurst, Victoria, in the 4.5, 7.5 or 12 megacycle bands" ... V. by QSL-card.

MOUNT STROMLO OBSERVATORY

Addr: Mount Stromlo Observatory, Australian National University, Box 4, P.O. Canberra, A.C.T. Australia. Te: Mt. Stromlo 511. Cable: Solorab—L.P.: Chief Time Sec: H. J. M. Abraham. Sen. Techn. Officer: J. N. Boots.

Stations: VHP2 4286kHz/VHP3 6428.5kHz/VHP4 8478kHz/VHP5 12907.5kHz/VHP6 17256.8kHz (all 10kW): 00.25–00.30, 07.55–08.00, 13.55–14.00, 19.55–20.00; VHP7 22845kHz 00.25–00.30, 07.55–08.00.

OBSERVATORIO NACIONAL, Brasil

Originates time signals, which are broadcast by stations PPE & PPR. PPE: Addr: Serviço da Hora, Observatorio Nacional, Rua Gen. Bruce 586, Rio de Janeiro, GB ZC-08, Brasil—L.P.: Chief Eng: C. G. Lacombe.—Station: 8721kHz: 13.25–13.30, 20.25–20.30, 00.25–00.30. PPR: Addr: Radio Rio, Av. Francisco Bhering, Arpoador, Rio de Janeiro, GB—Stations: 435, 8634, 13105, 17194kHz, 14.25–14.30, 21.25–21.30, 01.25–01.30.

DOMINION OBSERVATORY, Canada

Addr: 3 Observatory Crescent, Ottawa 4, Ontario, Canada. Te: 232-8211—L.P.: Addr: Dr. J. Hodgson, Dir. Tec: M. M. Thomson. Stations: CHU 3330kHz 90.09m, 3kW—7335kHz 40.90m 3kW—14670 kHz 20.45m 3kW—T.S.: Continuous by voice and seconds pulses. Ann: English: "CHU Canada, Eastern Standard Time". French: "CHU Canada, Heure normale de l'est". V. by QSL-card. Re. welcomed. Pub: Station information free.

STATION CCV, Chile

Addr: Instituto Hidrográfico de la Armada, Casilla 324, Valparaíso. Stations: 8558/12960kHz: 11.55–12.00, 13.55–14.00, 15.55–16.00, 21.55–22.00, 00.55–01.00.

STANDARD FREQUENCY STATION OMA

Addr: Budcska 6, Praha 2, Vinohrady, Czechoslovakia. Te: 258758. L.P.: Dir: B. Sternberk—Stations: OMA 50kHz 20kW: 24h—OMA 2500kHz 1kW: 24h—OLB5 3170kHz 8kW: 24h—OLD2 18985kHz 30kW directed to Far East: Wed, Fri 12.45–13.00—Ann: In Morse code—V. by QSL-card. Re. wanted.

CENTRE NATIONAL D'ETUDES DES TELECOMMUNICATIONS

FFH: Addr: 196, rue de Paris, 92 Bagneux, France. Te: 532–40–00. L.P.: Chief Eng. Freq. Dept: P. la Maida, Chief Eng: B. Decaux. Station: FFH 2500kHz 5kW: 08.00–16.25 (Mon–Fri)—Ann: In Morse on the 9th and 49th minute.

BUREAU INTERNATIONAL DE L'HEURE

Addr: 61 Avenue de l'Observatoire, Paris 14, France—L.P.: Dir. B. Guinot—Stations: St. André de Corcy FTA91 91.15kHz 45kW: 08.00, 09.00, 09.30, 13.00, 20.00, 21.00, 22.30; Pontoise FTH42 7428kHz 6kW: 09.00, 21.00—FTK77 10775kHz 6kW: 08.00, 20.00—FTN87 13873kHz 6kW: 09.30, 13.00, 22.30—V. by letter.

ZLFS, LOWER HUTT, New Zealand

Addr: Physics & Engineering Laboratory, Lower Hutt, New Zealand. Station: 2500kHz 0.3kW: CW only Wed 01.00–04.00—Ann: S. identification is made in Morse code at the beginning and end of each tr.

DCF77, MAINFLINGEN, Germany

Addr: Physikalisch-Technische Bundesanstalt, Braunschweig, Bundesallee 100, Fed. Rep. of Germany. Cable: "Bundesphysik". Te: 5921—L.P.: Pres: Prof. Dr. Ing. M. Kersten, Dir. of Dept. 1: Prof. Dr. U. Stille; Dir. of Sect. 1/2: Prof. Dr. U. Adelsberger, Dr. Ohl, Dr. Süss—Station: DCF77 77.5kHz 12kW nd transm. extends essentially from 06.45–10.35, 19.00–20.10 and around every full h until midnight. Call sign DCF77 in Morse-code, amplitude modulations 440 and 200 c/s. Interruptions every second (duration 50 ms). Pub: Progr. sched. on request.

GERMAN HYDROGRAPHIC INSTITUTE

Addr: P.O. Box 220, 2 Hamburg 4, W. Germany. Te: 311121. Cable: Hydroinst. L.P.: Head Time Sec: Dr. H. Enshin. Unmodulated time signals at 23.55–00.06 on DAN 2614kHz(2kW), DAO 2775kHz(2kW), DAM 6475.5kHz(5kW)(21/3–20/9); DAM 12763.5kHz(15kW)(21/3–20/9); DAM 4265kHz(5kW)(21/9–20/3); DAM 8638.5kHz(10kW)(21/9–20/3); 11.55–12.06 on 2614, 2775, 8638.5, DAM 16980kHz (15kW).

LF transmissions: Unmodulated time signals at 07.01–07.10, 10.01–10.10, 19.01–19.10, 19.31–19.40, 20.01–20.10, 21.01–21.10, 22.01–22.10, 23.01–23.10, 00.01–00.10, 01.01–01.10, 02.01–02.10 on DCF77–77.5 kHz(12kW) (Sun 19.01, Sat 10.10; 01.01–01.10, 02.01–02.10 only 1/3–21/10)...

DAM = Elmshorn; DAO = Kiel; DAN = Norddeich; DCF77 = Mainflingen.

GERMAN GEODETIC INSTITUTE

Addr: DDR15 Potsdam, Telegrafenberg 17—L.P.: Dipl. Ing. G. Hemmler—Station: Nauen (DIZ) 4525kHz 5kW: 09.45–08.15.

NATIONAL PHYSICAL LABORATORY (Gov.)

Addr: Teddington, Middlesex, Gt. Britain. Te: 01–977 3222. Cable: Bushylab, Teddington. Telex: 262344.

MFS Standard Frequency Service:

kHz	m	W	
60	5000	10	continuous
2500	120	0.5	continuous*
5000	60	0.5	continuous*
10000	30	0.5	continuous*

*continuous but tr. interrupted 6 times an h at mins 5–9 $\frac{1}{2}$, 15–19 $\frac{1}{2}$, 25–29 $\frac{1}{2}$ etc.

Ann: Call sign given seven times in Morse at minutes 9–10, 19–20, 29–30 on the H.F. transmissions, and in the half minute preceding the hour and half hour on the 60kHz transmission except between 14.30 and 15.30 when it is the same as the H.F. schedule—V. by letter.

ROYAL GREENWICH OBSERVATORY

Addr: Time Dept, Herstmonceux Castle, Hailsham, Sussex, England. Te: Herstmonceux 3171. Cable: Observcr.

The international Time Signals are radiated by GBR 16kHz (reserve: GBZ 19.6kHz) at 03.00, 09.00, 15.00 & 21.00 and on high freq's at 09.00 and 21.00. The freq's used are selected according to current ionospheric predictions. Freq's available: GIC24 4025kHz, GAY25 5807kHz, GIC27 7397.5kHz, GPB30B 10331.5kHz, GIC33 13555kHz, GIC37 17685kHz (Powers: GBR350kW, GBZ 250kW, others 15kW)—V. QSL-cards not available.

WORLD PUBLICATIONS

LINDORFSALLE 1, HELLERUP, DENMARK

offers you the following publications:

Improve your shortwave reception

A "how to build" handbook on short-wave equipments in order to obtain the best possible s.w. reception. Price: D.Kr. 18.50, US \$2.75, £0/19/0, DM 10.85, sv. Kr. 13.75. Extra for transport: D.Kr. 1.75, US \$0.25, £0/1/4, DM 1.00.

Short Wave Antennas

This handbook enables you to choose the best antenna for your purpose and consequently give you the best possible reception. Price: D.Kr. 9.75, US \$1.25, £0/10/10, DM 6.00, Sv. Kr. 7.50. Extra for transport: D.Kr. 1.50, US \$0.25, £0/1/6, DM 1.00.

The Radio TV Constructors Handbook

A "how to build" handbook containing descriptions of many different up-to-date equipments. Price: D.Kr. 29.75, US \$4.35, £1/10/10, DM 17.50, Sv. Kr. 20.00. Extra for transport: D.Kr. 2.50, US \$0.35, £0/2/6, DM 1.30.

Transistors in Practice

Theory, Practice and "how to build" descriptions. Price: D.Kr. 29.75, US \$4.35, £1/10/10, DM 17.50, Sv. Kr. 20.00. Extra for transport: D.Kr. 2.00, US \$0.30, £0/2/3, DM 1.20.

How to build TV antennas

You can easily spare money by building your own TV-antenna—or improve your TV-reception by help of the descriptions etc. in this handbook. Price: D.Kr. 16.50, US \$2.50, £0/17/10, DM 10.00, Sv. Kr. 12.50. Extra for transport: D.Kr. 1.65, US \$0.25, £0/1/9, DM 1.00.

How to improve your TV-reception

You can easily correct many faults or irregularities in connection with your TV-reception by help of the illustrated descriptions in this handbook. Price: D.Kr. 7.00, US \$1.00, £0/8/0, DM 4.75, Sv. Kr. 2.00. Extra for transport: D.Kr. 1.50, US \$0.25, £0/1/6, DM 1.00.

(continued from page 56)

ATA, NEW DELHI, INDIA

Addr: National Physical Laboratory, New Delhi.

Stations: 10000kHz 2kW: 05.30-10.30.

IAM, ROME, ITALY

Addr: Istituto Superiore, Ministero P. T. Rome. L.P: Dir: Ing. F. Martorana—Station: 5000kHz 1kW—all day exc. Sun 07.30, 08.30, all day exc. Sat, Sun 13.00, 14.00. During summer 1h earlier.

IBF, TURIN, ITALY

Addr: Istituto Elettrotecnico Nazionale, Corso Massimo d'Azeglio 42, Torino. Te: 688773—Stations: 5000kHz 5kW: W 06.45-07.00, 08.45-09.00, 09.45-10.00, 10.45-11.00, 11.45-12.00, 12.45-13.00, 13.45-14.00, 14.45-15.00, 15.45-16.00, 16.45-17.00, 17.45-18.00 — Ann: Emissioni di frequenze e tempo campioni dall' Istituto Elettrotecnico Nazionale — V. by QSL-card.

STATION JJY

Addr: Radio Research Laboratories, Koganei, Tokyo, Japan. Te: (0423)81-1661—L.P: Chief Freq. Standard Division, Y. Saburi—Stations: all 2kW nd, 24h: 2500kHz-5000kHz-10000kHz-15000kHz—All freq's are interrupted at 29-34 min. past each h. Mod. seconds pulses of 8 cycles of 1600c/s and 1000c/s tone—Ann: At 34-35 min's & 59-00 min's in each h. identifying signals are tr. consisting of callsign in morse code (twice), time in JST once in morse code, callsign twice in voice, time in JST once in voice and grade of propagation warning in morse code—V. by QSL-card.

TOKYO ASTRONOMICAL OBSERVATORY

Addr: Mitaka-shi, Tokyo. L.P: Asst. Chief, Time Division, Dr. S. Iijima—Station: Oyama (Oyama-shi, Tochigi-ken) JAQ56 16170kHz 10kW: D 12.25-12.30 directed to Europe.

STATION OBC, PERU—Addr: Estación Central de Comunicaciones Navales Radio, Callao, Perú. Stations: OBC 490/12307kHz: 15.55-16.00, 18.55-19.00, 00.55-01.00.

REP. OBSERVATORY SOUTH AFRICA

Addr: Republic Observatory, Johannesburg. Te: 43-2026. Cable: Astronomer—L.P: Dir: J. Hers—Stations: Call ZUO: Olifantsfontein 5000kHz 4kW—Johannesburg 10000kHz 0.25kW—Johannesburg 100 MHz 0.050kW: 24 h per day, exc. for interruptions 15 to 20 min. past each h.

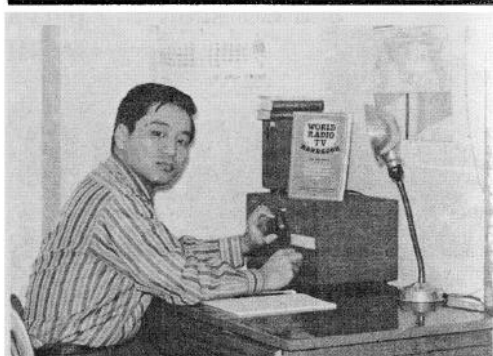

Time Signals: Continuous second pulses, consisting of 5 cycles of 1000c/s tone. The minute pulse is prolonged to about 1/2 second—Ann: In morse code every 15 min's (just before each quarter hour): ZUO, ZUO, ZUO followed by the Universal time of the next minute—V. by letter will be answered if they are genuine reports.

US NAVAL OBSERVATORY, Navy Department, Washington, DC. 20390, USA—L.P: Dir. Time Sec. Div: G. M. R. Winkler.

VLF Time Signals are aired from 55 to 60th min's as follows: NSS (Annapolis): each h on 21.4kHz. NBA (Canal Zone): each h exc. 23.55-24.00 on 24.0kHz—HF Time Signals, begin 5 min's before the hour and terminate on the h.

NSS (Annapolis): 04.55, 10.55, 16.55, 22.55 on 88kHz*, 5870, 8090, 12135, 16180kHz (*exc. Tues 16.55 when on 185kHz); 16.55, 22.55 on 20225 & 25590kHz—NPG (San Francisco): 23.55, 05.55, 11.55, 17.55 on 114.95kHz, 4010, 6428.5, 9277.5, 12966, 17288 & 22635kHz—NPM (Honolulu): 05.55, 11.55, 17.55 on 131.05kHz, 4525, 9050, 13655, 17122.4 & 22593kHz—NPN (Guam): 23.55, 05.55, 11.55, 17.55 on 484, 4955, 8150, 13530, 17530, 21760kHz—NBA (Canal Zone): 04.55, 10.55, 16.55, 22.55 on 147.85kHz, 5448.5, 11080 & 17697.5kHz.

Remember: The Danish DX-programme "The DX-Window" each Sun 10.30, and repeated Mondays 08.15, 12.45, 14.45, 19.15 and Tuesdays 01.45 GMT.

Shinichi Shiraiishi: c/o Myojyo Cement Co., Itoigawa, Japan.

MINDED...**

Appropriate contrast, perfect image stability,
correct density range, extreme sharpness...
exactly what television technicians expect
"their" film to have.

Two colour camera films :

Gevachrome Original, Types 6.00

(50 ASA - 3200° K) and 6.05 (160 ASA - 3200° K);

two black-and-white camera films :

Gevapan 30 Reversal - Type 8.63

and Gevapan 36 Reversal - Type 8.80

For making television copies : two colour films : Gevachrome Print

Type 9.02 and Gevacolor Positive - Type 9.54 (TV Contrast);

two black-and-white films : Gevaprint TV-Type 5.64

and Duplicating Reversal - Type 8.91.

NEW

Lynch

SPEECH SCRAMBLER

Assures privacy for Telephone or VHF Radio Communication

Complete speech privacy is now a reality with the advent of the Lynch E75 solid-state Speech Scrambler. Voice conversation transmitted over telephone circuits or radio are assured privacy by the simple selection of any one of over 2,000 different code cards. The illegal tapping of telephone circuits or monitoring of radio transmissions will be heard only as garbled, unintelligible speech to anyone other than the person who possesses the matching code card and identical equipment.

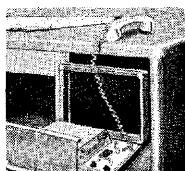

Unlimited Portability

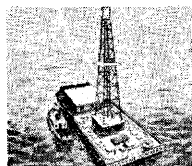

The Lynch E75 Speech Scrambler may be used anywhere land or radio telephone circuits exist; even in an automobile, boat or airplane. The power source can be any standard 120-volt outlet or a 12-volt DC source, such as an automobile cigarette lighter receptacle. When not in use, the E75 is enclosed in a handsome, durable attache case that gives it unobserved mobility.

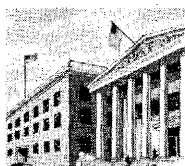

Trunk mounted
for mobile radio

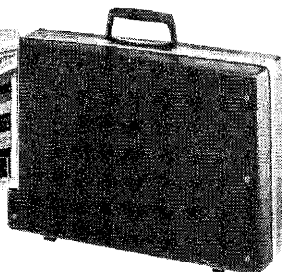

Desk mounting
for telephone

VHF Radio
on offshore rig

Governmental
Applications

Price-\$1,955.00
(Includes two code cards)
(Other code cards optionally
available)

LYNCH COMMUNICATION SYSTEMS

690 BRYANT STREET, SAN FRANCISCO, CALIFORNIA 94107 • AREA CODE 415 397-1471

SONY EM-2 SERIES

EM-2 (CCIR)/EM-2N (NAB)

Exclusively for recording; full track; tape speed 7.5 ips. $\pm 0.2\%$; max. 5" reel; two heads (1 for record/playback & 1 for erase); monitoring with crystal earphone; wow & flutter less than 0.15%; S/N better than 50 db; battery 8 pcs. size D and 6 pcs. size C, for 4 hours continuous operation.

EM-2S (CCIR)/EM-2NS (NAB)

Additional capability to EM-2, i.e. sync pilot signal recording (DIN) through a different channel and sync recording head.

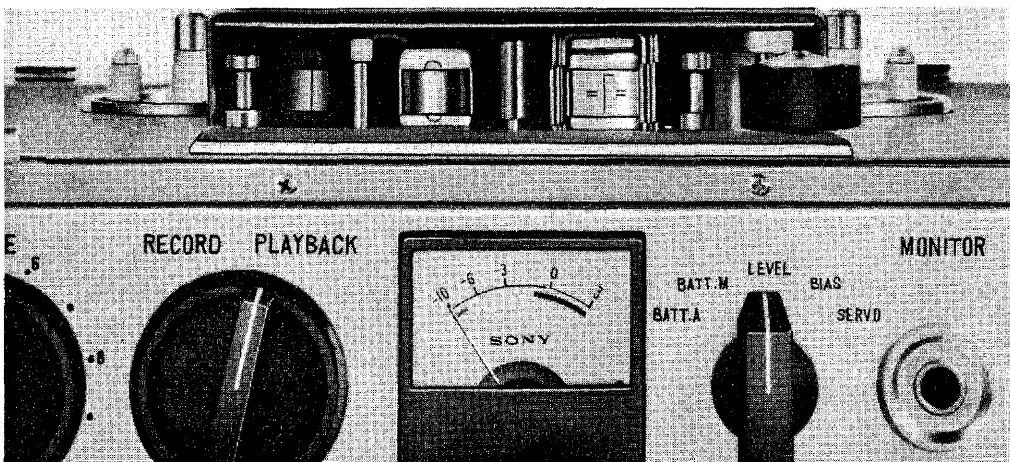

EM-2T (CCIR/NAB switch selected)

Not only for recording as EM-2 but also for reproduction, with playback head and amplifier; batteries 16 pcs. size C, for 4 hours continuous operation.

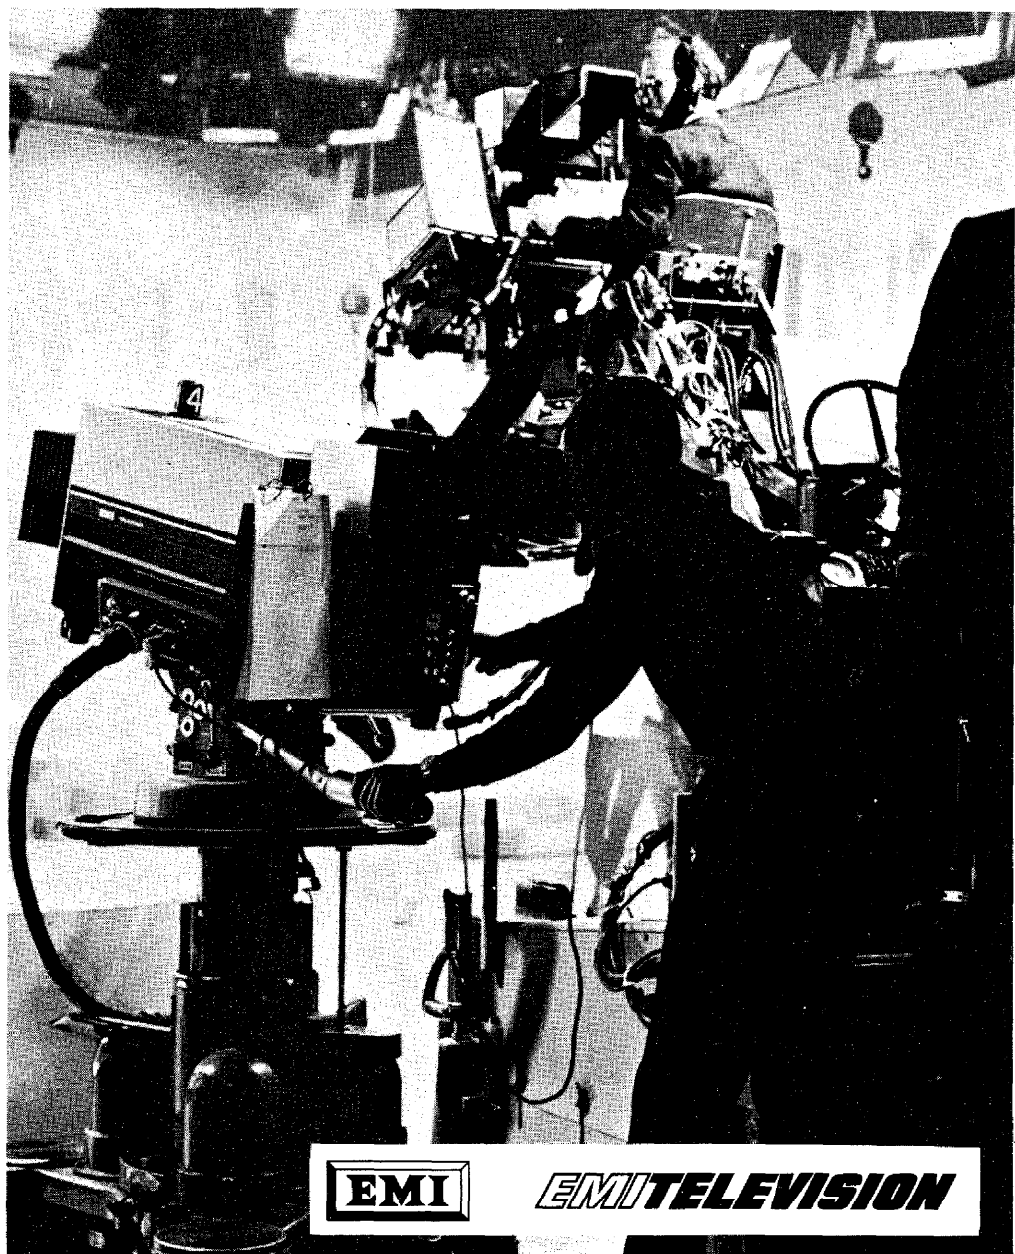

- * Shoulder-type portable with professional quality with solid state construction, weighing merely 5.5 kgs (12 lbs) with batteries and tape.
- * Battery-powered high performance DC motor with electronic servo system for precise tape speed control; wow/flutter less than 0.15%.
- * Unique counter balanced fly-wheel system incorporated into the rigid tape transport and printed circuit board amplifiers ensure highly stable operation even in moving vehicles or when recording-while-walking.
- * Versatile for field applications such as on-the-spot interviews, sound effect recordings, etc.

EMITELEVISION

**Britain's
busiest
colour
camera**

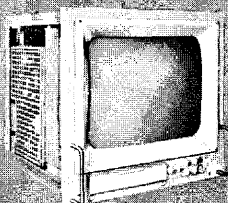

The EMI Type 2001 won such rapid acceptance from the broadcasting industry that, within a year of its introduction, orders worth over £3 million had been received for the camera and ancillary equipment. These included 68 cameras for the B.B.C.; 22 for London Weekend; 20 for A.T.V.; 14 for Thames Television; five for the Yorkshire T.V. Centre; four for Harlech T.V. and nine for Granada T.V. including O.B. vehicle. This is the camera with features that won for EMI the Queen's Award to Industry - unique features including the integral zoom lens and the capstan arrangement of the four pick-up tubes that makes

**The
award
winning
EMI 2001**

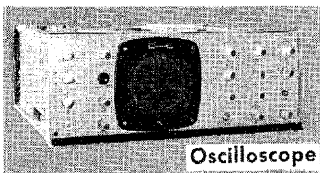

this such a compact and perfectly balanced unit. The separate luminance channel together with sealed direct imaging optics ensures excellent colour registration and resolution and improved contrast. See the Type 2001 at IBC or write or telephone for a practical demonstration of EMITELEVISION colour capability. An Invitation

**Join
Us**

in a unique and unusual organization, the Radio New York Worldwide Listeners Club, your membership entitles you to the following . . .

■ The Bulletin, issued bi-monthly, contains the most complete information and news on international communications, technical data and electronic news. Some outstanding articles already featured include: The Last Broadside, a report on Britain's pirate stations, Life in the Year 2000, an exciting look into the future, and Machines that Think, a lesson in automation and computer technology. The Bulletin also presents guest editorials, shortwave listening tips, plus a complimentary correspondence service for all members.

■ Every member receives an 8 and 1/2 inch impressive gold membership certificate and special wallet-sized membership card.

■ All members receive advance Radio New York Worldwide (WNYW) frequency and program information.

If you'd like to join for one year all you need do is send \$1.00 (U.S.) or its equivalent in any currency (check, money order, ten International Reply Coupons—available at your local post office or, in the United Kingdom, domestic money orders in the amount of 8/4d and crossed), to:

Model 314

- ◆ the most little endless tape reproducer.
- ◆ professional performance—remote control.
- ◆ designed both table or rack mount installation.
- ◆ available in set of 2, 3, 6, 9 reproducers with manual or automatic sequential operation.
- ◆ price very cheap.

Model 3x311-SS

- ◆ assembly of 3 professionals reproducers
- ◆ manual or automatic sequential operation.
- ◆ transistorized plug-in modules.

WRITE FOR PRICE LIST AND COMPLETE INFORMATION

The SM60 cannot be stereotyped—is equally at home in the studio or in the field—stand-mounted or hand-held—in uses as diverse as outdoor sporting events and elaborate variety shows. Small wonder that audio engineers have called it one of the most versatile omnidirectional dynamics they've ever encountered, for the SM60 is a unique combination of good-looks, strength, performance and economy.

The smooth, wide-range response provides cleanest, natural reproduction of both speech and music. A very effective built-in wind and "pop" filter protects against undesirable effects of close-talking. Lustrous, non-glare metallic finish and tailored-to-

the-hand dimensions provide striking on-camera appearance and superior handability. Specially reinforced machined-steel case front is designed to take abuse that would ruin other microphones—you can drop it on its nose without damage to the internal structure! Efficient windscreen and front end are quickly and easily removable for cleaning.

Best of all, it is priced competitively with conventional "workhorse" microphones. Why not check out an SM60 now?

Write for complete information and technical data today, to Shure Brothers, Inc., International Sales, 222 Hartrey Ave., Evanston, Illinois 60204, U.S.A.

SHURE SM60

VERSATILE OMNIDIRECTIONAL DYNAMIC MICROPHONE

THE LAST WORD IN WEARABLE LAVALIER MICROPHONES ... BY SHURE

Specifically designed for radio, TV, motion pictures ... matches well in sound with stand or desk mounted units. Smoothly-contoured, machined-steel case and recessed grille for minimum clothing noise. Exclusive snap-in mounting of microphone for greater convenience, security. "Positive Lock" lavalier goes on in an instant—provides simple, noiseless position adjustment. Extra-flexible, kink-free rubber cable is easily replaceable.

where
the difference
is more than
the music!

... wherever you live,
almost anywhere in Europe,
Africa, the Caribbean and the
Americas, you can hear the
sound of New York City from
WNYW, Radio New York
Worldwide. There's music,
network news on the hour and
closing stocks twice daily—
direct from the Exchanges, on
13, 16, 19 meters shortwave.
When you're in New York you
can hear WRFM Stereo,
Radio New York's full-time
Stereo FM station. Covering
the metropolitan area from its
antenna 1220 feet atop the
Empire State Building, WRFM
Stereo brings you the music
and song of Barbra
Streisand, Sinatra, Peggy Lee,
Bobby Darin and Andy
Williams ... all tastefully
presented. WRFM Stereo 105
... where the difference is
more than the music!

Listen here!

Ampex equipment records some pretty sophisticated things.

(But not always.)

There's the big, costly, spectacular side of Ampex—world leaders in the recording of sound and vision. Like recording data flashed back from lunar probes for scientific evaluation.

There are other sides.

Like the video/audio equipment that tapes a pop-star's performance for radio or television. Like the low-cost domestic recorder that tapes baby's first cries or a South Pacific chorus—if that's your taste.

Point is, Ampex build into every product the same design flair—the same meticulous attention to detail. Ampex put their skills to work in nearly every area of human activity, wherever there's a need for perfect reproduction of sound or vision or both.

Take Ampex videotape recording. This is simply the ability to record pictures and sound—and reproduce them almost at once—in slow motion or stop motion if need be. This technique used to be reserved for broadcast television. Ampex brought the technique—and the professional-quality equipment into wider usage. Videotape recording has a potential application in nearly everyone's job. Ampex recorders serve business, industry, commerce, education, sport, medicine, defence, engineering—and and pleasure.

There could be a place in your own professional or private life. A place that might surprise you.

1. AG-20 is the portable recorder with professional playback quality. Here officers of the Royal Green-jackets record conversation in free fall—the first-ever recording under such conditions.

2. Ampex 900 Series of rotary-head recorders provided essential data for manned lunar landings—sending back sharp-definition TV pictures of the moon.

3. The Ampex Videomobile—a professional videotape recording unit built into a standard production car. TV units get new mobility.

4. Here, an advertising agency executive group is taking delivery of their new VR-7003 videotape recorder. It will give them everything from low-cost previews of commercials to easy coverage of sales conferences.

5. The light-weight VR-3000 is the smallest standard broadcast videotape recorder ever—ideal for tough, remote news-getting assignments.

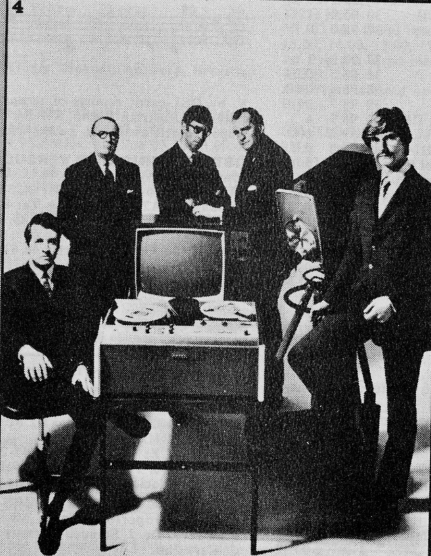

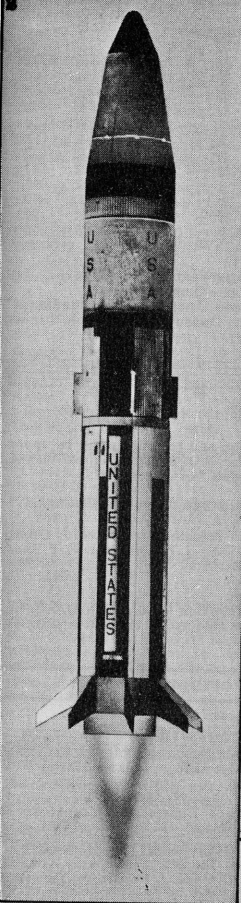

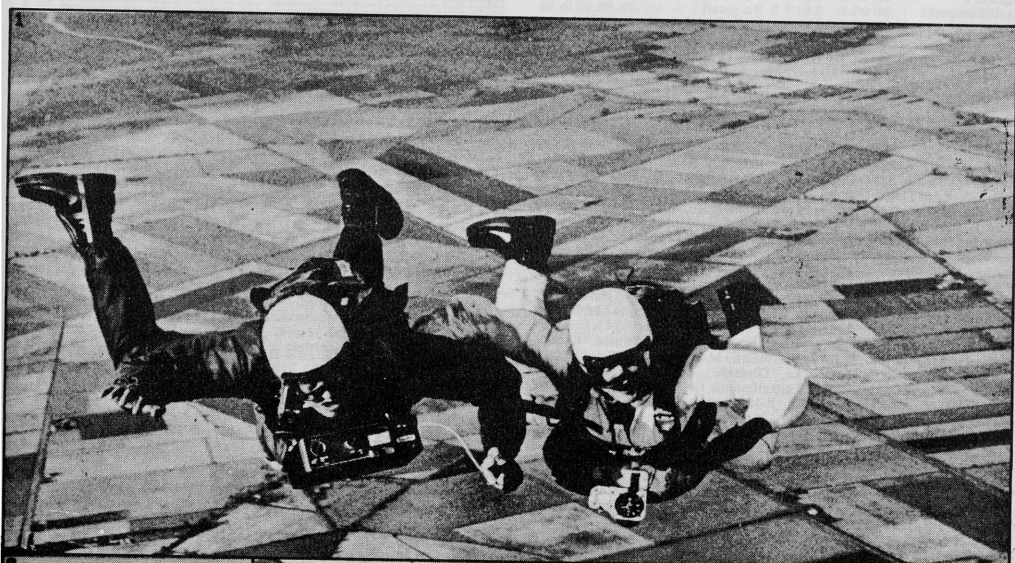

AMPEX

Ampex Great Britain Ltd., Acre Road, Reading, Berks. Ampex Europa G.m.b.H., Elbestrasse 1, 6 Frankfurt/Main, Germany. Ampex S.A., Via Berna 2, Lugano, Switzerland. Ampex, 14 Avenue Pierre Grenier, 92-Boulogne, France.

Video, Audio, Instrumentation and Digital Tape Recorders.

Closed Circuit TV. Computer Memory Systems. Magnetic Tape—for all recording applications.

telecommunication journal

In the increasingly international age in which we live, it is more important than ever that everyone connected with radio should be in touch with authoritative world opinion on radio matters. The Telecommunication Journal, the official organ of the International Telecommunication Union (ITU), serves just this purpose. Since 1869 (when it first appeared as the "Journal Télégraphique") it has faithfully covered all aspects of telecommunications which come within the purview of the world organization (now a UN specialized agency) set up in 1865 to regulate them.

The journal contains

- a news section covering the activities of the ITU, of its Member Administrations and of private operating companies and highlighting technical advances in radio throughout the world -
- a list of satellite launchings notified during the previous month -
- a section entitled "Ideas and Achievements" which covers the major developments of telecommunications in the various Member Administrations -
- articles by world experts, with a heavy emphasis recently on the latest developments in space communications -
- a comprehensive list of articles of telecommunication interest appearing in the scientific press throughout the world -
- official ITU information, including lists of forthcoming ITU Conferences and other international telecommunication meetings -
- monthly sunspot predictions -
- "Telephilately", a section devoted to stamps with telecommunications as their subject -
- section giving details of invitations to tender released by the various Member Administrations concerning telecommunication installations.

It is published monthly by the ITU in separate English, French and Spanish editions.

It costs 2.5 Swiss francs a copy. The annual subscription is 25 francs for one language edition, 50 francs for two and 75 francs for three.

For further information, write to: Telecommunication Journal, ITU, Place des Nations, 1211 Geneva, Switzerland.

NEDERLANDSE RADIO UNIE

ADDR: P.O. Box 150, Hilversum. Cable: Radiounie. Te: 02950/48506. Telex: 14470

HOME SCE: The Home Sec. is prepared by several broadc. societies under the technical supervision of the NRU. The available time on the three networks is offered to the following societies:

- 1) Nederlandse Radio Unie (40% of all time).
- 2) Algemene Vereniging Radio Omroep (AVRO), 's-Gravelandseweg 52, Hilversum, in connection with the Radio-TV-Nederland (RTN), Honthorststraat 6, Amsterdam, and the Stichting Brabantse Omroep (SBO), Bladel.
- 3) Katholieke Radio Omroep (KRO), Emmastraat 52, Hilversum.
- 4) Nederlandse Christelijke Radio Vereniging (NCRV), Schuttersweg 8, Hilversum (Orthodox protestant).
- 5) Omroepvereniging (VARA), Heuvelaan 35, Hilversum (Socialist).
- 6) Televisie Radio Omroep Stichting (TROS), Herengracht 543, Amsterdam (neutral).
- 7) Vrijzinnig Protestantse Radio Omroep (VPRO), 's-Gravelandseweg 63, Hilversum (Liberal Protestant). Church-services and religious prgrs are prepared by:
- 8) Convent van Kerken (CVK), Melkpad 32, Hilversum (Protestant).
- 9) Interkerkelijk Overleg in Radio-Aangelegenheden (IKOR), Borneolaan 27, Hilversum (Protestant).
- 10) Rooms Katholiek Kerkenoetschap (RKK). (Roman Catholic).

Further 9 "Mini-Omroepen" have time too as well as the Dutch Government.

BOARD OF THE NEDERLANDSCHE RADIO-UNIE:
Chmn: Dir. A. B. Roosjen. Vice Chmn: J. B. Broeks. Sec: Drs. Ch. E. v. d. Ploeg. Prgr. Affairs: Dr. W. J. A. Wagenaar. Techn. Affairs: Dr. A. H. v. d. Veen. Personnel Affairs: K. W. Wilde.

STATIONS: The studios are in Hilversum, but the tr's (owned by the Nederlandse Omroep Zender Maatschappij) are located at Lopik (near Utrecht):

MOSAIC OF SOUND

'Speech is civilization itself...
it is silence which isolates'.
(Thomas Mann)

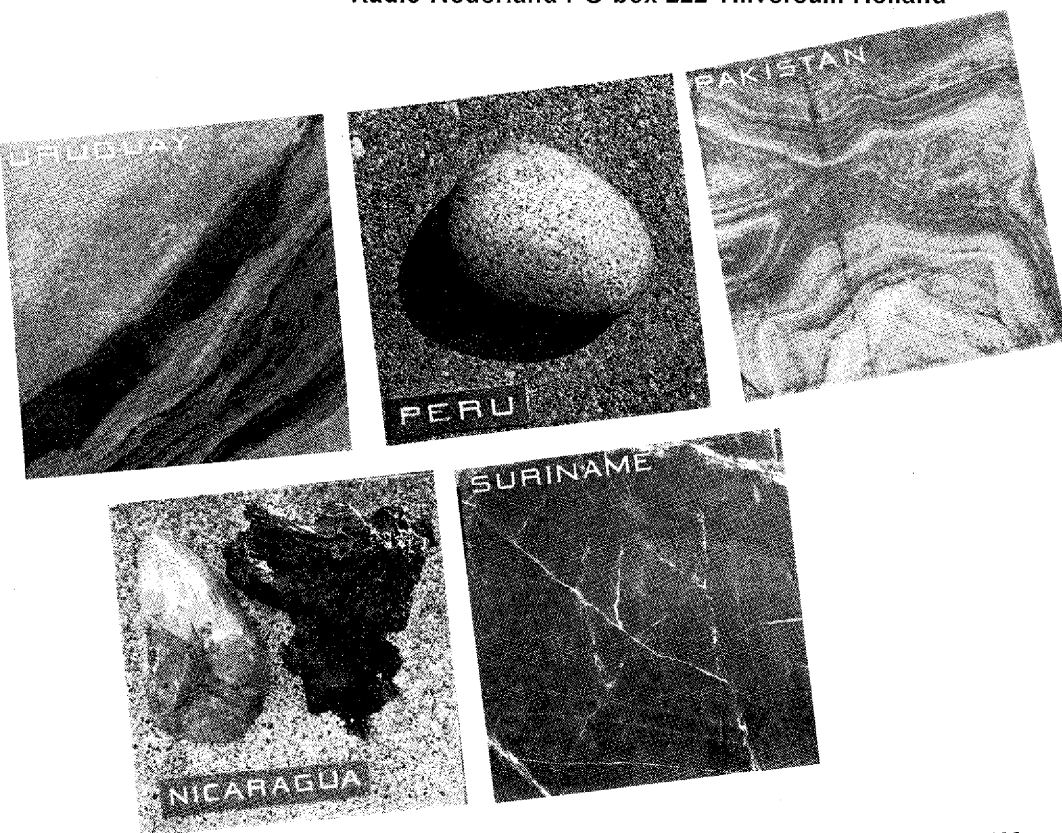

Seventy countries contributed the elements of natural stone in the unique tableau facing Radio Nederland's studio building in Hilversum.

Its mosaic arrangement is symbolic of world friendship, an ideal that finds further expression in the mosaic of sound produced in Radio Nederland's studios.

Communication (the modern word for speech) has more meanings than the dictionary specifies. You will discover them all in Radio Nederland's transmissions.

*THE SWEDISH DX FEDERATION is an organization with more than 30 Swedish dx- and shortwave clubs. The joint monthly dx-magazine of all these clubs is called:

*ETER-AKTUELLT. The magazine is printed in offset, and is now one of the leading dx-magazines in Scandinavia. Many well known dx-ers are regular contributors.

*INFORMATION about The Swedish DX Federation and a sample copy of ETER-AKTUELLT can be obtained from our international secretary. If you are interested, please send one IRC for postage.

THE SWEDISH DX FEDERATION, international secretary, Box 19008, S-200 73 MALMO, Sweden.

This is RADIO MOSCOW

You can pick up Radio Moscow in 64 languages and dialects of the world and in ten languages spoken in the Soviet Union. We beam programs to all continents on both short and medium waves.

If you'd like first-hand information about the Soviet view of international affairs, socialism in practice, and the more than 100 nationalities and ethnic groups inhabiting the Soviet Union, don't fail to tune in to Radio Moscow.

We also feature talks on Soviet economic progress and cultural affairs. There are programs about literature, art, music and sports, special features for stamp collectors.

Radio Moscow answers listeners' letters by post and often on broadcasts. We play requested music and run quizzes.

We welcome comment and quote from listeners' letters on our programs. At the request of listeners we arrange interviews and panel discussions with statesmen, civic leaders, industrial and farm workers and professionals, both communists and unaffiliated.

Tune in to Radio Moscow!

WORLD PUBLICATIONS

LINDORFSALLE 1, HELLERUP, DENMARK

WORLD RADIO BULLETIN

will each fortnight publish the latest news from stations and expert-monitors all over the world and in this way keep you informed about new frequencies, new stations, program details of interest and consequently give you corrections to the World Radio TV Handbook and its Summer-Supplement. The World Radio Bulletin contains 8 pages beautifully printed and often contains illustrations.

The subscription rate for the bulletin is: *By airmail*: Annually: D.Kr. 50.00, US \$7.30, £2/12/0, DM 30.00; Six months: D.Kr. 30.00, US \$4.00, £1/12/0, DM 18.00. *By seamount*: Annually: D.Kr. 33.00, US \$5.00, £1/15/0, DM 20.00; Six months: D.Kr. 18.00, US \$3.00, £1/0/0, DM 12.00.

You can reduce the price by ordering two or more copies for you and interested friends sent to the same address. If you for instance order two copies by airmail sent to the same address the subscription rate will be only by airmail annually: D.Kr. 40.00, US \$5.75, £2/0/0, DM 23.00 including all transport by airmail. By seamount there will also be a reduction: D.Kr. 30.00, US \$4.25, £1/5/0, DM 16.50.

Continental Electronics...

1,000,000 WATT AM MF TRANSMITTER

Continental designed and built the first super-power transmitter for the Voice of America. Delivering 1,000,000 watts of continuous power to the antenna, it was installed at Munich in 1953. Similar Continental 1,000,000 watt broadcast transmitters are installed in Okinawa, the Philippines, Thailand, Central America and Egypt.

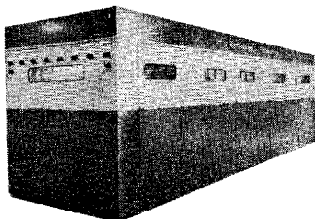

1,000,000 WATT AM MF TRANSMITTER

Continental's newest 1,000,000 watt transmitter during construction, factory test early in 1968.

500,000 WATT AM MF TRANSMITTER

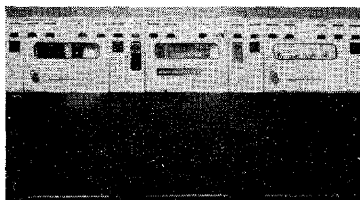

250,000 WATT AM MF TRANSMITTER

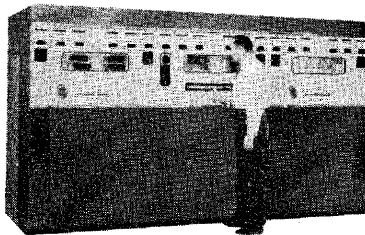

200,000 WATT AM MF TRANSMITTER

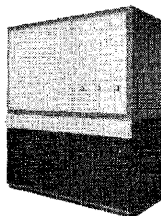

Two Continental 100,000 watt transmitters combined for 200,000 watt output.

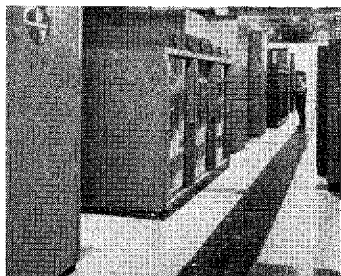

100,000 WATT AM MF TRANSMITTER

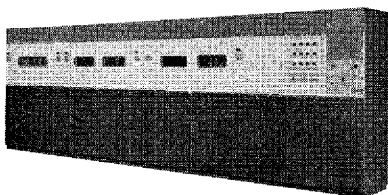

50,000 WATT AM MF TRANSMITTER

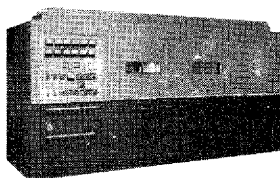

10,000 WATT AM MF TRANSMITTER

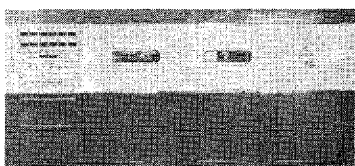

500,000 WATT AM HF TRANSMITTER

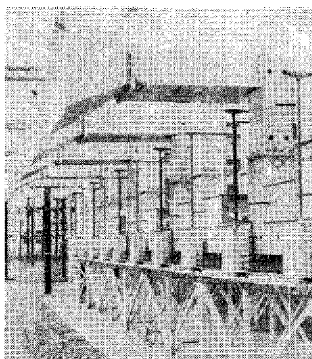

250,000 WATT AM HF TRANSMITTER

100,000 WATT AM HF TRANSMITTER

50,000 WATT AM HF TRANSMITTER

TRANSMISSION LINE SWITCHING MATRIX

Continental has gained worldwide experience in the design, engineering, development, construction and installation of specialized broadcast systems and components. This equipment includes: specialized antenna systems, transmitter dummy loads, phasing and coupling equipment and combiners for a wide range of transmitter power levels.

When you need high power broadcast equipment, come to the specialists! For information, write: A. V. Collins, International Broadcasting, Continental Electronics Mfg. Co., Box 17040, Dallas, Texas 75217.

You can join Radio Australia's Listeners Club—and receive the club badge and certificate—by: Providing 12 reception reports at a rate of two per month over a period of six months.

Numbering each report 1, 2, 3, etc., to 12 to assist us in keeping records.

Providing the following details in each report: name of programme, frequency, date, time, comment on reception quality, and type of receiver.

It is preferable, though not essential, to send these reports on Radio Australia reception report cards, which are available on application to: Radio Australia, Melbourne, Australia. Verification cards are sent for each correct reception report.

ARMED FORCES RADIO AND TELEVISION SERVICE		
ADDR: Deputy for Armed Forces Radio and Television, Office of Information for the Armed Forces, ASD(M), Washington, D.C. 20305 -- L.P.: Dir. John C. Broger, Deputy Dir. for Armed Forces Radio and Television; Louis G. Cruciani, USAF, Officer-in-charge; Col. Robert Cranston, USA. This office exercises over-all policy control of the Armed Forces Radio and Television Service (AFRTS). The mission of AFRTS is to keep U.S. service-men informed on current events. All broadcasts are in English. News, Sports and other timely information is beamed overseas by shortwave tr's on the U.S. Atlantic and Pacific Coasts and a relay tr. in the Philippines. These sw-tr's serve the overseas stations and ships at sea which relay them locally. Programs other than news and locally produced programs are derived directly from the U.S. Commercial radio and TV networks. These programs are transcribed or kinescoped and shipped to the overseas stations by the Armed Forces Radio and Television Service, Los Angeles, California. L.P.: Officer-in-Charge: Col. Robert R. Eby, USAF.		
WORLDWIDE SERVICE (from Washington, D.C.)		
ADDR: Armed Forces Radio and Television Service, Washington, 1117 North 19th Street, Arlington, Virginia 22209 -- L.P.: Chief, LTC Harry R. Bangs. Chief Engineer: Enrico Bove.

L.P. Chmn: Grover C. Cobb. Pres: V. T. Wasilewski. Vice-Pres, Radio: Charlie Stone. Sec. Treas: E. E. Revercomb.

COMMERCIAL STATIONS

A new format for radio was born during the past year in the United States—progressive rock. More than two dozen FM radio stations in the U.S. and Canada are now featuring a progressive rock format. The format involves a combination of songs either with meaningful lyrics (this includes folk songs) and records featuring the progressive music of groups like the Cream, the Doors, Beatles. This type of format is the hottest thing in the States and many AM radio stations are now including one or more hours top 40 of progressive rock in their regular schedule; many AM radio stations are playing some progressive rock records along with their regular records, especially as the records become so popular.

Through progressive rock formats, FM stations in general are beginning for the first time to make an impact in audience rating surveys. There has also been a gain in stations programming country music, notably WCOP in Boston, WIL in St. Louis, and WHOO in Orlando, Fla. which all switched to country music just recently.

With the United States, the power of a radio station is often not as important to listeners as its programming. In major cities, radio stations concentrate their programming to appeal to a given segment of the population and there's a type of programming available to appeal to

almost every listening taste. There are stations that devote their entire broadcast day to news, others that devote their time to talk programs. In most cities, the station with the largest listening audience is that station which aims its programming to teenagers and young adults—primarily the people who buy single 45 rpm records. These are mostly rock 'n' roll records and the stations base their programming on Billboard Magazine's Hot 100 Chart, which lists the top-selling single 45 rpm records in the nation. Other radio stations program music to appeal to young adults and adults and their music is selected from Billboard's top 40 Easy Listening Chart. These "good music" stations usually have the major part of the radio listening audience during morning and early afternoon listening hours before teenagers get out of school.

There are also radio stations that program nothing but country music, others that program Latin American music, others that feature rhythm and blues (aimed primarily at Negro listeners), many that program religious services and religious music, a few that feature mostly jazz, a few that program "background"—or soft relaxing—music, and a good many that program nothing but classical music.

In many cases, the signal of a radio station is directional, meaning that reception is better in the direction the station is aiming its signal.

Most radio stations, because of the better broadcast conditions, cut down their power at night.

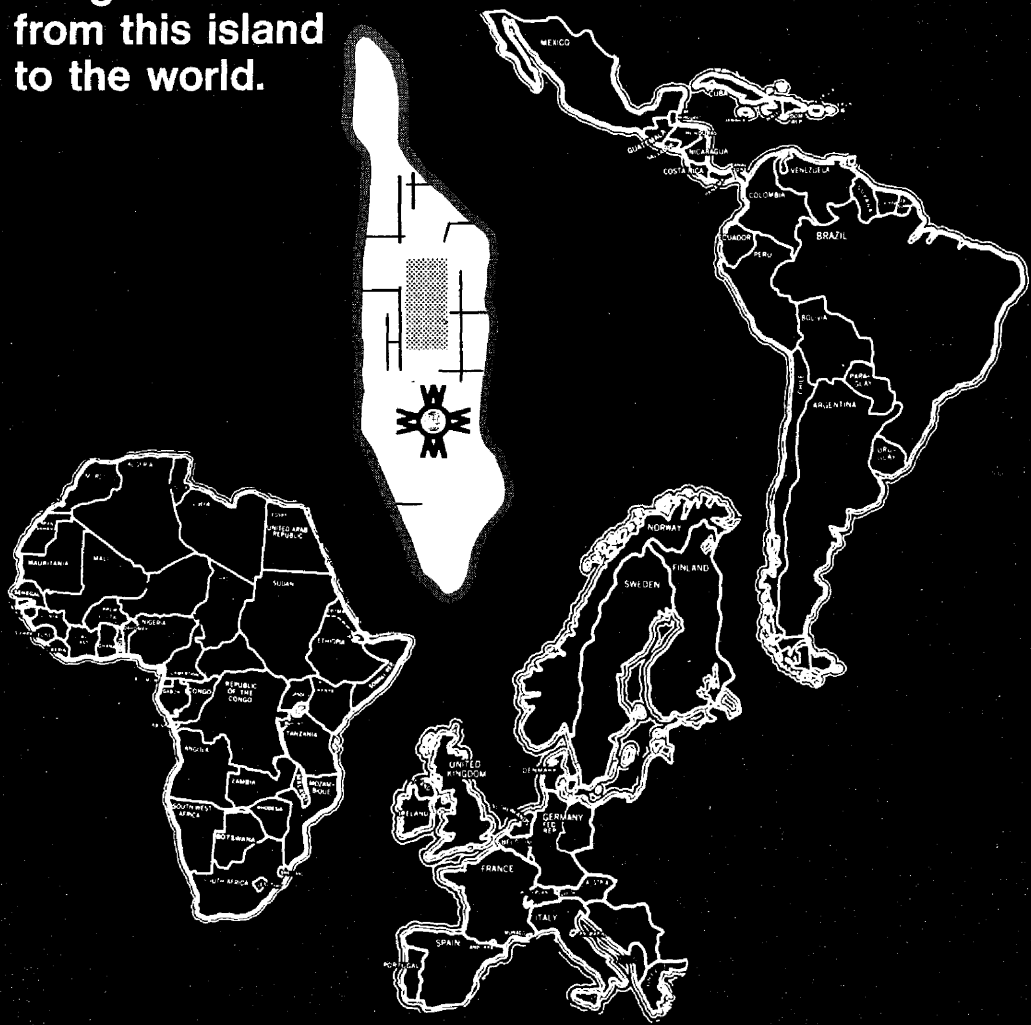

Because many radio stations are limited to daytime operation only on AM, a large number of these stations round out a broadcast schedule through an affiliated FM radio station.

Following is a list of MW stations operating with 10kW power or more. Not only is the address of the station provided, but its principal official, its operational hours (local time), but where the station is known for one type of programming, the kind of programming available on the station.

NB: Clear channel st's are listed in bold types.

The INTERNATIONAL RADIO CLUB OF AMERICA, the leading U.S. medium-wave club, publishes a 20-page bulletin 34 times annually that includes tip and QSL sections, listings of new MW stations around the world and call and frequency changes, a section for members' letters, and special features. We publish lists of regular frequency checks and all-night stations, and reception report forms in Spanish, French, Portuguese and English. QSL contests are held annually, and achievement certificates are awarded. Free sample bulletin from Don Erickson, 6059 Essex St., Riverside, California 92504 USA.

NATIONAL ASSOCIATION OF EDUCATIONAL BROADCASTERS (NAEB)

Headquarters: 1346 Connecticut Ave., Washington, D.C. 20036. **Telex:** (202) 667-6000 — **L.P.:** Pres: W. G. Harley. Asst. to Pres: James A. Fellows; Exec. Dir.: Chalmers Marquis; Exec. Dir. of Radio: Gerold Sandler.

Formed in 1925 as the Association of College and University Broadcasting Stations, the National Association of Educational Broadcasters today includes four divisions — the Educational TV Stations, National Education Radio, Instructional Division (through which the NAEB serves universities, colleges, schools and educational organizations which operate licensed or closed circuit stations) and the Individual Member Division (which serves the professional career needs of those in educational broadcasting). Since 1950, the NER division has operated a tape network, supplying member st's with programming material not only from member st's but also from domestic and foreign producers like the BBC, the CBC, the RAI, Radio Nederland, Radio Belgium and the French Broadcasting System. The ETS division operates the ETS Program Wystem. The Indiana University, to make available outstanding locally-produced programs on a nationwide basis. This service, together with that of National Educational TV, and independent organization primarily responsible for production and distribution of cultural and public affairs, programmes, provides educational TV stations with programming. The ETS division also publishes a monthly newsletter for for ETV station managers — The ETS News.

There are now 163 radio st. members, 134 TV st. members. In addition, the NAEB has 2400 individual members. According to FCC regulations, non-comm. educational FM st's have no restrictions on transmission time.

THE NORTH-AMERICAN BROADCASTING CORPORATION

(NABC — a non-profit, educ. organization).
Headquarters: Jackson Bldg. 1929 Irving St., San Francisco, Calif. 94122. **Telex:** 731-6630. (Transcription Sec., Telefilm Distribution Center & Netw. at above address.) **L.P.:** Chmn of Board of Dir's: Allan Bruce Erickson. Departmental Heads: Gen. Mgr. (Radio): Michael K. Erickson. Transcription Sec.: Cathy Myers. Engineering: Ron V. Pelt. TV-Department: James E. Hunt. International Relations: Sandy Harris.

Stations: 389 educational organizations owning and operating a total of 422 stations (radio) and 43 stations (television), such stations being full members of the NABC. Plus 217 stations (radio) operated commercially which relay programs from NABC on a sustaining (non-commercial) basis. Such stations have Associate Membership.

Fi: By Membership Fees. Also support from outside sources for special projects.

Activities & Functions: The NABC operates both a network and a Transcription Sec. which duplicates, via tape, and distributes to member stations seven hours of programming per week (average). NABC maintains close relations with many international broadcasters and participates actively in program exchanges, news projects and cultural affairs. Several overseas broadcasters release programs through the NABC and these include the NZBC and ORTF. NABC is a Charter Corporate Member of the I.B.S.

Policy: It is the policy of the NABC to promote international goodwill, cultural exchanges and better programming in the public interest and in the interest of international understanding. The NABC is independent politically and financially from any government and endeavours to present a fair, impartial and objective viewpoint on world issues. Its programming policies attract new listeners because of balanced content, creating cultural interest where none existed before. Its long-term plans include the establishment of a Production/Announcing and General Training Center for personnel, a Drama Repertory Company, Symphony, Concert and Light Music Orchestras (House Orchestras) and overseas offices and studios.

Regional Centers: Northfield, Minnesota (Mgr.: Mr. P. Peterson); Delaware, Ohio (Mgr.: Mr. Gaukel); Provo, Utah (Mgr.: Mr. Lee Stott); New York, N.Y. (Mgr.: Dr. H. Chesnaiss); Pacifica, California (Mgr.: Dr. W. R. Cleaves).

Overseas Prg. Exchange Sec: P.O. Box 94122, San Francisco. Head: Mr. T. R. Fischer.

NATIONAL ASSOCIATION OF FM BROADCASTERS

ADDR: 665 Fifth Ave., New York, N.Y. **L.P.:** Chmn of the Board: Gary M. Gielow. Pres: Abe Voron. Exec. Sec: Edward S. Kenehan. Dir. of Adm.: Lois Heuer. Vice Pres: David H. Polinger. **Purpose:** To promote the FM medium. The NAB has an FM division, but a group of young, energetic FM broadcasters formed the NAFMB, seeking to improve the medium faster. One of their all-out campaigns during the past year, for example, was to get more radios capable of receiving FM in cars and this campaign has been very successful. Under strong leadership and the active interest of its members, FM radio has made long strides in the past year or so. FM, for the first time, is being accepted as commercial radio by advertisers. Also, FM radio now features all kinds of formats, even rock'n'roll; it is no longer the quality medium for the elite or the music buff; it is a mass-medium for everyone. There have also been strides in stereo, and 710 FM st's now broadcast in multiplex stereo, according to the NAFMB, with more stations changing to stereo every day.

GOVERNMENT AGENCY:

THE FEDERAL COMMUNICATIONS COMMISSION (FCC) — the licensing agency for broadcast st's.

ADDR: 1919 "M" Street N.W., Washington, D.C. 20554. **L.P.:** (key officials): Chmn: Rosel Hyde. Exec. Dir.: M. D. Paglin. Sec: B. F. Waple. Chief, Broadcast Bureau: G. S. Smith.

The FCC is an independent Federal agency, composed of seven Commissioners appointed by the Pres. by and with the advice and consent of the Senate. One of its major activities is the general regulation of broadcast, now visual as well as aural. This regulation may be divided into three phases. 1) The allocation of spectrum space to the different types of broadcast services, 2) Considerations to build and operate individual stations, 3) Regulating their operation.

Call letters: International agreement provides for the national identification of the radio st. by the first letter or first two letters of its assigned call signal, and for this purpose apportions the alphabet among different nations. USA st's use the initial letters K.N. and W, exclusively, and part of the A series. Broadcast st's are assigned call letters beginning with K or W. Generally speaking, those beginning with K are assigned to st's west of the Mississippi River and in the territories and possessions, while W is assigned to broadcast st's east of the Mississippi.

Number of broadcast st's in the USA as of June 1st, 1968

	Authorized	Operating
AM	4281	4178
FM Commercial	2080	1808
FM Educational	377	333
TV Commercial	832*	610
TV Educational	186	123
TV Translators	2426	2119

* Of the 832 authorized commercial TV stations, 518 are VHF, 314 are UHF.

UNITED NATIONS

UNITED NATIONS RADIO

ADDR: United Nations, New York. **Cable:** Unations, New York. **Telex:** Plaza 4-1234. **Telex 222422** — **L.P.:** Asst. Sec. Gen. Office of Public Information: A. Abdul Hamid. R. & Visual Services Div: Dir: J. d'Arcy. Deputy Dir: D. Ritchie. Chief of Operations & TV: M. Hayward. Chief of Radio: J. Quijano. Chief of International Communications: J. C. Nichols.
INT-SIG: Music Chime.

ANN: "This is the United Nations". This introductory phrase is used in all official UN prgs. in all of the languages concerned.

Message to listeners: The R. & Visual services Division is anxious to establish contact with as many listeners as possible and will gladly acknowledge all communications. Upon request, new correspondents are sent a prgr. sched. and some general information about the United Nations and the Specialized Agencies. Correspondence and requests for copies of the schedule of UN broadcasts should be addressed to the Director of the nearest UN Information Centre. These are located in

United Nations — Costa Rica

Accra, Addis Ababa, Algiers, Asuncion, Athens, Baghdad, Bangkok, Beirut, Belgrade, Bogota, Buenos Aires, Bujumbura, Cairo, Colombo, Copenhagen, Dakar, Dar Es Salaam, Geneva, Kabul, Karachi, Kathmandu, Khartoum, Kinshasa, Lagos, La Paz, Lima, Lomé, London, Manila, Mexico City, Monrovia, Moscow, New Delhi, Paris, Port Moresby, Port-of-Spain, Prague, Rabat, Rangoon, Rio de Janeiro, Rome, San Salvador, Santiago, Sydney, Tananarive, Teheran, Tokyo, Tunis, Washington, Yaounde.

Request for copies of the sched. of UN broadc, which can be heard in the United States should be addressed to: Radio and Visual Services Divisions, United Nations, New York.

The World Radio TV Handbook is the only international handbook of its kind.

World Radio TV Handbook is used by the managing directors and engineering staffs of radio & television stations. Equipment manufacturers looking for world markets are thus presented with an ideal medium for reaching all their potential customers in this fast growing field.

These facts give authority and weight to a sales message in the World Radio TV Handbook. It will help increase your sales because it will reach the technical staffs of radio and television stations, institutions, organizations, amateurs and short wave listeners.

a proper name, INDEED!

Yes, Record Source International lives up to its name in providing the unique service you have needed for perfect programming!

RECORD

The complete output of new American records, singles and albums, are listened to and evaluated, as they are released, by the knowledgeable review panel of Billboard Magazine, the world's leading weekly business paper for the music-record industry. The **best** selections for programming are then included in RSI services which encompass singles (weekly) or albums (monthly) on a regular subscription basis.

SOURCE

Here is a central source of new American record product, by **all** artists — in **all** categories — from **all** labels. Here, too, is a central source of "standards" and catalog product to embellish your present library.

The logo for Record Source International (RSI) features the letters 'RSI' in a large, bold, serif font. The letter 'S' is stylized with a circular design element in the center.

INTERNATIONAL

RSI serves the musical needs of broadcasters the world over . . . now serving over 6,000 radio stations in 45 countries throughout the world. The **best** of newly released records . . . or on an individual selection basis for new and catalog product . . . shipped to any part of the world via surface or air mail.

If you consider your audience you'll consider the "SOURCE". For full details and a free catalog of rates and services write:

RECORD SOURCE INTERNATIONAL

165 West 46th Street, New York, N.Y. 10036

The best pick-up arm in the world

Used by enthusiasts, professionals, broadcasting and recording companies, only SME Precision Pick-up Arms offer all these features. Choice of arm length — Model 3009 (9") or Model 3012 (12") for still lower tracking error — of special importance with elliptical styli. Low inertia. High precision ball races and knife-edged bearings for minimum pivot friction. Linear offset chosen for lowest distortion. Automatic slow descent with hydraulic control. Bias adjuster calibrated for tracking force. Exact overhang adjustment with alignment protractor. Precise tracking force from $\frac{1}{2}$ -5 grams applied with a gauge. Shielded output socket. Low capacity 4' connecting cable with quality plugs. Light weight shell. Camera finish in satin-chrome, gun-black and anodised alloy. Representatives in principal countries.

Television on VHF/UHF (Band IV/V) Europe and Africa.
VHF/UHF television systems for Band IV/V adopted by the European Broadcasting Conference Stockholm 1961 and by the African Broadcasting Conference, Geneva 1963 are 625-lines systems only. These can be grouped into 5 categories, here called Standards G to L:

Standard	Video Band-width (MHz)	Picture/ Sound Modulation (MHz)	Vestigial Sideband (MHz)	Picture modulation	Sound modulation	Frequency of chrominance subcarrier (MHz)	Power ratio picture/ sound
G	5	5.5	0.75	Neg	FM	4.43	5:1
H	5	5.5	1.25	Neg	FM	4.43	5:1
I	5.5	6	1.25	Neg	FM	4.43	5:1
K	6	6.5	0.75	Neg	FM	4.43	5:1
L	6	6.5	1.25	Pos	AM	4.43	8:1

32	559.25	44	655.25	56	751.25	68	847.25

The sound carrier frequency for each channel can be determined by adding the appropriate figure to the vision carrier frequency given above (5.5Mc for systems G, H; 6Mc for system I and 6.5Mc for systems K, L). In We. Germany ch38 is reserved for aero-navigation.

Following on the type TM 110 and TM 112, of which more than a thousand sets are in use throughout the world, the new type TM 210 represents the third generation of CSF transportable television radio-relays. It was designed in close collaboration with the O.R.T.F. Outside-broadcasting Department, it uses solid-state techniques throughout and transmits pictures (monochrome or colour) and associated sound together. TM 210 equipment was extensively utilised at the Winter Olympic Games (Grenoble, 1968).

Marconi Mark VII the 'hands-off' colour television camera with the highest sensitivity

By courtesy of Teletape Productions, New York

OUTSTANDING RELAY OPTICS

Only *Relay Optics* enable unique Marconi field lens masks to be fitted. This cuts out stray light and scatter at the vital point, so that only light from the true image areas fall on the tubes, giving higher fidelity colour.

Only *Relay Optics* allow light paths to be extended and directed to enable the use of more accurate and parallel yokes, giving better pictures unaffected by extraneous magnetic fields.

Only *Relay Optics* permit the use of lenses with short back conjugates, which give highest resolution throughout the system.

Only *Relay Optics* allow adequate space for the use of two independent filter wheels for control of light temperature and intensity.

Only *Relay Optics* give complete flexibility in choice of lenses.

Highest sensitivity

Proved highest sensitivity. Optimum spectral distribution without need for electronic colour correction. Special head amplifiers give high fidelity signal at source. Aperture correction applied to luminance channel for fine detail reproduction.

Long term 'hands off' stability

Operates day-after-day with minimum adjustment. Rigid stability results from use of unique thin film circuits, and

the highest quality components and most sophisticated circuitry. Unaffected by fluctuating magnetic fields of up to 10 gauss.

Optimum operational flexibility

Ergonomically designed for optimum operational flexibility in studio and O.B. use. Compact, rugged and light in machined magnesium. Easily detachable lens package. Highly manoeuvrable and adaptable to all cranes and dollies.

MIFED

MIFED, the International Film, TVfilm and Documentary Market, is an international centre where feature, TV and documentary films are traded on a worldwide scale. Contacts are made there for negotiating agreements in any branch of film production, co-production, financing and the issue of import and export licences.

MIFED headquarters, which are equipped with all modern facilities and comforts, contain numerous rooms for the projection of cinema and TV films. The services of technicians and interpreters are provided free. International cable, telephone, telex and telefoto facilities are available. Also conference rooms, offices, dining rooms and bars. Medical assistance on the premises.

MIFED is held twice a year: in APRIL to coincide with the Milan Fair, and in OCTOBER.

Information: MIFED

Largo Domodossola 1. - 20145 Milano (Italy)

DX Editor, Trans World Radio

A. Riewesel, Swedish DX-Editor Deutschlandfunk.

TV PRODUCTION COMPANIES

With the increasing internationalisation of the Television industry and the development of world wide trade in TV productions, World Radio TV Handbook introduces for the first time in this edition a world listing of TV production companies.

For this inaugural listing, details of the companies have been kept to a minimum with only the address indicated. In some cases the letters C or F have been added to indicate a company specialising in commercial advertising productions for television (C) or feature productions (F).

TV production companies requiring a fuller entry in next year's edition of World Radio TV Handbook are invited to write to the Editor enclosing the additional information.

EUROPE

Austria

Batavia Film GmbH, Mariahilferstr. 47/III, 1060 Vienna.
Belvedere Film (Marischka GmbH), 1030 Vienna, Dampfschiffstr. 12.

NORTH AMERICA (incl. Mexico)

compiled by the National Radio Club, USA

Explanation of listing:—

FIRST COLUMN — Call letters and location are required identification for U.S. and Canadian st's. each half hour. Symbols in front of the call letters are as follows: * Construction Permit for new station, not yet on air. † Construction permit for move to this frequency from a different frequency. In parenthesis, frequency and/or power changes will be designated by two symbols — CP, Construction Permit, and PO, Presently Operating.

SECOND COLUMN — In addition to the standard abbreviations for U.S. and Mexican states, and Canadian provinces, certain geographical city and town names have been abbreviated. These include: Bch. — Beach; Cd. — Ciudad; Cy. — City; E. — East; Ft. — Fort; Hts. — Heights; Mt. — Mount; Mtn. — Mountain; No. — North; Pk. — Park; So. — South; Spgs. — Springs; St. — Saint; Ty. — Territory; and W. — West. FOURTH COLUMN — Contains authorized operating hours and directional antenna information. The symbols mean as follows: D is daytime operation (between local sunrise and local sunset), D1 without directional antenna, D3 with directional antenna. (Under a new ruling of the F.C.C. certain daytime st's can operate between 0600 local time and sunrise when it is later than 0600 with reduced power); L is limited time, and means a st. West of the dominant st. can operate from as early as sunrise at the dominant st's location; A st. east of the dominant st. can operate as late as the dominant st's sunset. Number indicates directional pattern as under "U" below. SH equals "Specified Hours" and usually means a st. that would normally operate unlimited time files a schedule of reduced hours with the FCC because of economic reasons. ST means "Shares Time". This usually finds a college, university, or church st. on the air two or three hours a day, during which time the commercial st. signs off. U means the st. is authorized to operate any time up to 24 hours a day. U1 means without directional antenna; U2 means with directional antenna at night; U3 means directional antenna, same pattern, day and night; U4 means directional antenna, different pattern day and night; U5 means directional antenna daytime, non-directional at night. Two Canadian st's are listed N, night only. The operators of these st's. have st's. on other frequency which operate daytime only: 710/730; 710/1230kHz.
